

REGULATIONS FOR THE DEGREE OF MASTER OF SCIENCE (MSc)

(See also General Regulations)

Any publication based on work approved for a higher degree should contain a reference to the effect that the work was submitted to the University of Hong Kong for the award of the degree.

The degree of Master of Science is a postgraduate degree awarded for the satisfactory completion of a prescribed course of study in one of the following three fields: Applied Geosciences, Food Industry: Management and Marketing, and Materials Science.

Admission requirements

Sc20 To be eligible for admission to the courses leading to the degree of Master of Science, a candidate

- (a) shall comply with the General Regulations; and
- (b) shall hold
 - (i) a Bachelor's degree with honours of this University; or
 - (ii) another qualification of equivalent standard of this University or another University or comparable institution accepted for this purpose.

Sc21 A candidate who does not hold a Bachelor's degree with honours of this University or another qualification of equivalent standard may in exceptional circumstances be permitted to register if the candidate can demonstrate adequate preparation for studies at this level and satisfies the examiners in a qualifying examination.

Qualifying examination

Sc22

- (a) A qualifying examination may be set to test the candidate's academic ability or his/her ability to follow the courses of study prescribed. It shall consist of one or more written papers or their equivalent and may include a project report.
- (b) A candidate who is required to satisfy the examiners in a qualifying examination shall not be permitted to register until he/she has satisfied the examiners in the examination.

Award of degree

Sc23 To be eligible for the award of the degree of Master of Science, a candidate

- (a) shall comply with the General Regulations; and
- (b) shall complete the curriculum and satisfy the examiners in accordance with the regulations set out below.

Length of curriculum

Sc24 The curriculum of the part-time programme shall extend over not less than two academic years of part-time study and of the full-time programme over not less than one academic year. Candidates shall not be permitted to complete the curriculum in more than 3 academic years, except with the approval of the Faculty Board.

Completion of curriculum

- Sc25** To complete the curriculum, a candidate
- (a) shall follow courses of instruction and complete satisfactorily all prescribed written, practical and field work;
 - (b) shall complete and present a satisfactory dissertation or project on a subject within the candidate's approved field of study or complete courses with equivalent units as a replacement; and
 - (c) shall satisfy the examiners in all prescribed written papers and in any prescribed oral or practical examination.
-

Title of dissertation or project

Sc26 The title of the dissertation or project shall, for the part-time programme, be submitted for approval by March 15 of the first year of study in which the teaching programme ends and the dissertation or project report shall be submitted not later than April 15 of the second year of study. The title of the dissertation or project shall, for the full-time programme, be submitted for approval by October 15 and the dissertation or project report shall be submitted not later than August 15 in the subsequent year. The candidate shall submit a statement that the dissertation or project represents his/her own work (or in the case of co-joint work, a statement countersigned by his/her co-worker, which shows his/her share of the work) undertaken after registration as a candidate for the degree.

Examinations

Sc27 An assessment of the candidate's coursework during his/her studies, including completion of written assignments and participation in field work or laboratory work, as the case may be, is taken into account in determining the candidate's result in each course.

Sc28 A candidate who has failed to satisfy the examiners at his/her first attempt in courses totalling not more than half of the number of credits of courses in the examination held during any of the academic years of study may be permitted to present himself/herself for re-examination in the course or courses at a specified subsequent examination, with or without repeating any part of the curriculum.

Sc29 A candidate who is re-examined in any course shall not be eligible for the award of more than a pass grade in that paper.

Sc30 A candidate who has failed to present a satisfactory dissertation or project report may be permitted to submit a new or revised dissertation or project report within a specified period.

Sc31 A candidate who has failed to satisfy the examiners in any prescribed fieldwork or practical work may be permitted to present himself/herself for re-examination in fieldwork or practical work within a specified period.

Sc32 Failure to take the examination as scheduled, normally results in automatic course failure. A candidate who is unable because of illness to be present at any examination of a course, may apply for permission to be present at some other time. Any such application shall be made on the form prescribed within two weeks of the examination.

- Sc33** A candidate who
- (a) has failed to satisfy the examiners in more than half the number of credits of courses in any to be examined during any of the academic years, or in any course at a repeated attempt; or
 - (b) is not permitted to submit a new or revised dissertation or project report; or
 - (c) has failed to satisfy the examiners in their dissertation or project report at a second attempt;
- may be recommended for discontinuation of studies.
-

Examination results

Sc34 At the conclusion of the examination, a pass list shall be published. A candidate who has shown exceptional merit at the whole examination may be awarded a mark of distinction, and this mark shall be recorded in the candidate's degree diploma.

SYLLABUSES FOR THE DEGREE OF MASTER OF SCIENCE IN THE FIELD OF APPLIED GEOSCIENCES¹

A. COURSE STRUCTURE

Core Courses (33 credits)				
	*GEOS7010	Geology - Principles and Practice (6 credits) OR		
	*GEOS7023	Geology for Geotourism (6 credits) OR		
	*GEOS7011	Advanced Geology of Hong Kong (6 credits)		
	GEOS7012	Site Investigation and Engineering Geological Techniques (6 credits)		
	GEOS7020	Project I (3 credits)		
	*GEOS7021	Geological Fieldwork I (3 credits)		
	GEOS8002	Professional Practice in Applied Geosciences (3 credits)		
	GEOS8003	Seminars on Unforeseen Ground Conditions, Geotechnical and Environmental Failures (3 credits)		
	GEOS8020	Project II (9 credits)		
		* not core courses for the Engineering Geology with HKIE Approved Courses Theme		
Elective Courses (33 credits)				
	GEOS7004	Earth Science and Environmental Management (3 credits)		
	GEOS7011	Advanced Geology of Hong Kong (6 credits)		
	GEOS7015	Rock Mechanics (3 credits)		
	GEOS7016	Soil Mechanics (3 credits)		
	GEOS7024	Management (3 credits)		
	GEOS7025	Geological Fieldwork for Geotourism (6 credits)		
	GEOS7026	Introduction to Environmental Geology (3 credits)		
	GEOS8001	Hydrogeology (3 credits)		
	GEOS8005	Field Testing and Instrumentation in Engineering Geology (3 credits)		
	GEOS8021	Geological Fieldwork II (3 credits)		
	GEOS8101	Engineering Geology and Geotechnical Design (6 credits)		
	GEOS8102	Rock Engineering and Geomaterials (6 credits)		
	GEOS8103	Applied Geosciences for the Developing World (3 credits)		
	GEOS8201	Applied Geochemistry (3 credits)		
	GEOS8203	Geohazards (3 credits)		
	GEOS8204	Basic Structural Mechanics and Behaviour (3 credits)		
	GEOS8205	Mathematics I (6 credits)		
	GEOS8206	Mathematics II (6 credits)		
	EASC6001	Seminars (3 credits)		
	EASC2201	Hydrogeology (6 credits)		
	EASC6004	Geology of Asia-Pacific and Hong Kong (6 credits)		
	EASC6005	Special Topics in Applied Geosciences (6 credits)		
	ENVM7012	Environmental Economics and Analysis (3 credits)		
	ENVM7013	Principles of Sustainable Development (3 credits)		
	ENVM7016	Environmental policy (3 credits)		
	ENVM7017	Environmental law in Hong Kong (3 credits)		
	ENVM8006	Environmental Impact Assessment (3 credits)		
	ENVM8011	Environmental Auditing and Reporting (3 credits)		
	ENVM8012	Environmental Risk Assessment (3 credits)		
<i>Engineering Geology Theme</i>	<i>Engineering Geology Theme with HKIE approved courses</i>	<i>Environmental Geology Theme</i>	<i>Geosciences with Sustainable Development Theme</i>	<i>General</i>

¹ For students admitted in 2007-2008 or thereafter.

Certain courses not included in the list above may be accepted as alternative electives at the discretion of the programme director.

Timetabling of courses may limit availability of some elective courses.

Students following the one year full-time programme will follow the same curriculum (66 credits) as the part-time programme, except that course GEOS7022 Course of Directed Studies (3 credits) will be taken. This course provides the additional 3 credits required under the Engineering Geology Theme."

B. COURSE CONTENTS (Provisional)

GEOS7004 Earth Science and Environmental Management (3 credits)

The course examines major issues of earth science of relevance to environmental management. Case studies relevant to coastal cities will be presented. Topics include chemical composition of earth materials, geochemical surveys for pollution monitoring, geology and human health, environmental change in the Quaternary Period, fluvial and coastal processes and management, environmental impact of mining and dredging, geological aspects of land use planning, water resource management and waste disposal.

GEOS7010 Geology for Engineers (6 credits)

A review of fundamental concepts in geoscience, including earth and geological processes, surface processes, minerals and rocks, geological structures and geological map interpretation. The course also introduces the rocks and geological formations of Hong Kong.

GEOS7011 Advanced Geology of Hong Kong (6 credits)

This advanced course examines specialist aspects of the rocks and geological formations and structures of Hong Kong and their significance in the context of geotechnical engineering, environmental management and resource development. Topics include volcanic and granitic rocks, sedimentary and metamorphic rocks, weathering processes, superficial deposits, geology and geological aspects of landslides.

GEOS7012 Site Investigation and Engineering Geological Techniques (6 credits)

A professional course on the concepts and skills used in geotechnical site investigation. Topics include the design of site investigations, desk study and walkover survey, aerial photographic interpretation, soil and rock description and classification, ground investigation technology and soil and rock laboratory testing.

GEOS7015 Rock Mechanics (3 credits)

The course introduces the basic concepts of rock mechanics used in geotechnical practice. Topics include index properties, strength and deformability of intact rock; distribution and measurement of in-situ stresses; and shear strength of discontinuities in rock masses.

GEOS7016 Soil Mechanics (3 credits)

An examination of the basic soil mechanics theory used in geotechnical practice. The course reviews phase relationships, soil classification, compaction, fluid flow and effective stress concepts; and provides a more detailed analysis of elasticity, shear strength and consolidation.

GEOS7020 Project I (3 credits)

The first phase of an independent study of a problem in environmental or engineering geology. Students are required to write an inception report and give a presentation on their proposed study. Work is required on the project during the summer following the second semester. Professional geologists are expected to undertake a field mapping task as part of their project.

GEOS7021 Geological Fieldwork I (3 credits)

Self-directed study in the field over a 12-month period leading to the production of maps, field sheets, narrative accounts and other geological records for assessment. The fieldwork may be undertaken in association with the excursions of the Department of Earth Sciences, the local learned societies or independently. (Marked on a pass/fail basis.)

GEOS7022 Course of Directed Studies (3 credits)

Full-time students will take a course of Directed Studies that will be decided individually by the course directors. The course will include field work, laboratory work, class exercises, tutorials and reading in support of the core courses of the programme.

GEOS7023 Geology for Geotourism (6 credits)

This will be a joint course with GEOS7010 Geology - Principles and Practice (6 credits).

GEOS7024 Management (3 credits)

This subject will cover most of the following. Engineering processes, programming and procurement strategies: project framework, common methods for obtaining investigation, design and construction services, project programming. Contract management: Engineer's and contractor's site organisation, common forms of contract, specifications, methods of measurement, quantities and cost estimation, variations and claims, approaches to dispute resolution. Construction site safety, health and environmental aspects: Relevant regulations, environmental impacts of works and mitigation strategies. Quality control and quality assurance.

GEOS7025 Geological Fieldwork for Geotourism (6 credits)

This will be a joint course with GEOS7021 and GEOS8021 Geological Fieldwork I and II (6 credits).

GEOS7026 Introduction to Environmental Geology (3 credits)

The course provides an introduction to some aspects of Environmental Geology and will include tuition, reading and assignments.

GEOS8001 Hydrogeology (3 credits)

To study the role of sub-surface water in engineering and environmental applications. Topics include the hydrologic cycle, properties of aquifers controlling the transmissivity storage and quality of groundwater, quantification of groundwater flow, the field investigation of groundwater and assessment of field parameters and applications of hydrogeology in engineering and environmental studies.

GEOS8002 Professional Practice in Applied Geosciences (3 credits)

An examination of issues in professional practice in applied geoscience, such as the role of the engineering geologist, regulation of practice, professional ethics and law for professional geologists, engineering contracts, social topics and risk and safety management.

GEOS8003 Seminars on Unforeseen Ground Conditions, Geotechnical and Environmental Failures (3 credits)

A series of student-led seminars on case histories of landslides, collapses of engineering structures, excessive settlement and environmental disasters. Presentations of facts and opinions are given by students based on suggested reading material. The seminars are facilitated mainly by experts who were intimately involved in the case under study.

GEOS8005 Field Testing and Instrumentation in Engineering Geology (3 credits)

The course introduces several commonly used geophysical methods and in-situ testing techniques, including penetration tests, seismic cones, land geophysical surveys such as seismic refraction, microgravity, magnetic and conductivity surveys, ground penetrating radar, electrical imaging and downhole geophysical logging, and marine geophysics such as seismic and side-scan sonar surveys.

GEOS8020 Project II (9 credits)

The second phase of an independent study of a problem in environmental or engineering geology and the preparation of a project report of about 8000 words conducted under the supervision of a staff member. Professional geologists are expected to undertake a field mapping project.

GEOS8021 Geological Fieldwork II (3 credits)

Self-directed study in the field over a 6-month period leading to the production of maps, field sheets, narrative accounts and other geological records for assessment. The fieldwork may be undertaken in association with the excursions of the Department of Earth Sciences, the local learned societies or independently. (Marked on pass/fail basis.)

GEOS8101 Engineering Geology and Geotechnical Design (6 credits)

An examination of civil engineering design methodology and the application of soil mechanics theory and empiricism in geotechnical design. Emphasis is given to soil slopes and embankments, marine reclamations, earth pressure and retaining structures and piled foundations.

GEOS8102 Rock Engineering and Geomaterials (6 credits)

This course starts with a brief introduction to the design methodology and the systems approach in rock engineering, and is mainly focused on the collection and analyses of engineering geological data for the design of rock structures. Uses of rock mechanics input and empirical classifications in analysis and design of rock slopes, tunnel excavation and support systems, and rock foundations are demonstrated through case histories.

GEOS8103 Applied Geoscience for the Developing World (3 credits)

Selected topics of relevance in developing countries of Asia, including geotechnics for irrigation systems, low-cost roads in high mountains, road building materials, low-cost geo-fabrics, aseismic construction.

GEOS8201 Applied Geochemistry (3 credits)

Principles and hands-on experience of analytical techniques including nebulization ICP-MS, XRF and XRD; Basics of Environmental Geochemistry, Chemical Weathering, Clay Mineralogy, and Aqueous Geochemistry; Applications of Geochemistry to environmental problems; Case Studies, with an emphasis on Hong Kong.

GEOS8203 Geohazards (3 credits)

A review of the science relating to various natural hazards (flooding, landslides, seismic, volcanic) and the approaches to safety management.

GEOS8204 Basic Structural Mechanics and Behaviour (3 credits)

The subject will cover most of the following:
Behaviour of structural members subjected to tension, compression, bending, shear and torsion. Buckling of compression members. Statically determinate and indeterminate structures; including the concept of redundancy of structural members. Load transfer mechanisms of structural systems including foundations and shoring systems. General behaviour and basic concepts in design of reinforced concrete members. Structural design of foundations and retaining walls.

GEOS8205 Mathematics I (6 credits)

This course will cover the following topics: elementary and advanced calculus, matrix and vector algebra.

GEOS8206 Mathematics II (6 credits)

This course will cover the following topics: ordinary and partial differential equations, introduction to probability and statistics.

GEOG7220 Environmental Mapping and Risk Assessment (3 credits)

The integration of digital terrain modelling with spatial and statistical analysis makes GIS a powerful tool for environmental mapping and risk assessment. Landslide, for example, has been a widespread phenomenon in Hong Kong that hampers development into hilly regions prone to frequent landslide occurrences. The ability to map areas that are more risky than others is therefore important in hazard mitigation as well as land development planning.

EASC2201 Hydrogeology (6 credits)

The hydrological cycle, properties of aquifers, groundwater flow, groundwater as a chemical agent, groundwater geology, groundwater and environmental management, groundwater as a resource, groundwater as a geotechnical and environmental problem.

EASC6004 Geology of Asia-Pacific and Hong Kong (6 credits)

This course aims to provide an overview of the regional geology and tectonic evolution of East-SE Asia including key aspects of Hong Kong's geology.

Topics include: Tools used in unraveling plate tectonic development of the region; assembly of China; origin of the Chinese blocks (Rodinia versus Gondwana models); SE China in the Cretaceous and Cenozoic; Hong Kong's igneous rocks; sedimentary rocks; deep and shallow structure; active tectonic systems of the western Pacific-SE Asia; India-Asia collision; Tibet; Taiwan.

EASC6005 Special Topics in Applied Geosciences (6 credits)

This course aims to provide in depth knowledge of selected special topics in applied geosciences, including engineering and environmental geology, hydrogeology, engineering geophysics and quaternary geology.

Directed studies in a focused field of research recommended by the research group/supervisor, and writing of review reports and critiques.

ENVM7012 Environmental Economics and Analysis (3 credits)

The aim of this course is to equip students with the ability to undertake an economic analysis of the environment. It will examine the environment in the context of the market mechanism and policies for improving environmental performance. There will be an emphasis on market failure and strategies for internalizing the external costs of environmental damage. A good deal of attention will be paid to cost-benefit analysis and methodologies for the valuation of the environment. There will also be a consideration of alternative policy instruments from an economic perspective. The aim is also to examine way of managing resources in a way that is both economically and environmentally efficient.

ENVM7013 Principles of Sustainable Development (3 credits)

This course examines the emergence of the sustainable development paradigm and its role in guiding the design of environmental policy. The concept of sustainable development is discussed in its historical context and alternative formulations and interpretations are reviewed. The relationships between sustainable development and other emerging bodies of theory and practice, such as ecological modernization, are also examined. The course reviews how policies for enhanced sustainability can be developed and implemented at the urban, regional and international levels. These issues will be demonstrated in the context of Hong Kong, China and countries elsewhere in the world.

ENVM7016. Environmental Policy (3 credits)

This course focuses on processes of environmental policy making: how policy agendas emerge and evolve, the drivers and barriers influencing policy development, institutional structures for environmental policy making, stakeholder engagement, and the implementation of environmental policy. Theories of policy making are explored in relation to the environment and sustainable

development. Environmental policy making systems and outcomes are reviewed through local and international case studies.

ENVM7017. Environmental law in Hong Kong (3 credits)

This course will focus on the statutory interpretation of the four principal Ordinances and subsidiary legislation dealing with pollution in Hong Kong; namely the Water Pollution Control Ordinance, the Air Pollution Control Ordinance, the Noise Control Ordinance and the Waste Disposal Ordinance. Some consideration will also be given to the Dumping at Sea Ordinance, the Radiation Ordinance, the Merchant Shipping (Prevention and Control of Pollution) Ordinance, the Environmental Impact Assessment Ordinance, the Ozone Layer Protection Ordinance and international conventions effecting the law. Students will study the nature of environmental offences, including the requirement for proving “*mens rea*” (intent) in order for certain offences to be successfully prosecuted. Students will also be introduced to the principles of judge made law (the Common Law) and will learn to read and interpret relevant case law in order to better understand the current sentencing policies towards environmental offenders, both locally and in other Common Law jurisdictions.

ENVM8006 Environmental Impact Assessment (3 credits)

Environmental impact assessment (EIA) is one of the most important contemporary instruments of environmental management. Used widely around the world to identify the impacts of development projects as well as strategic plans and policies, EIA plays a key role in many regulatory systems for the environment. This course reviews the development of different approaches to EIA, basic analytical principles, administrative systems for EIA, assessments at the project and strategic levels (SIA), and case study applications in Hong Kong.

ENVM8011 Environmental Auditing and Reporting (3 credits)

This course is dedicated to the construction of an integrated environmental management system (EMS). The course will consider the design of the system, its implementation and issues of continuous improvement. Environmental auditing will be dealt with in the context of the systems-based approach and will examine audit methodology, measurement and quality assurance. The approach will be extended to the auditing of supply chains (particularly in China). Emphasis will be placed on practical approaches to improving environmental performance over time. Methods and techniques of reporting on systems and auditing will include both environmental reports as well as social and sustainable development reporting.

ENVM8012 Environmental Risk Assessment (3 credits)

Environmental risk assessments (ERAs) are a tool to determine the likelihood that contaminant releases, either past, current, or future, pose an unacceptable risk to human health or the environment. Currently, ERAs are required under various regulations in many developed countries so as to support decision-makers in risk characterization or the selection of cost-effective remedial cleanup. This course will introduce the theory and practice of human and ecological risk assessments. Students completing the course will gain a sound knowledge of the concepts and principles of ERAs, management and communication as applied in practice; understand the basic risk assessment tools (e.g. prospective, retrospective and tiered approaches) to environmental risk management; be able to select and apply the simpler tools to tackle risk issues; and appreciate the interpretations of risk and its role in environmental policy formulation and decision making.

**SYLLABUSES FOR THE DEGREE OF
MASTER OF SCIENCE IN THE FIELD OF
FOOD INDUSTRY: MANAGEMENT AND MARKETING**

A. COURSE STRUCTURE (Provisional)

First Year

Core courses (33 credits)

FOOD7001	Quality assurance and management (6 credits)
FOOD7002	GMP and environmental management (6 credits)
FOOD7003	Food quality preservation and evaluation (6 credits)
FOOD7004	HACCP and food laws (6 credits)
FOOD7005	R&D and export market strategies (9 credits)

Second Year

Core courses (33 credits)

FOOD8006	Marketing management (6 credits)
FOOD8007	Financial control (6 credits)
FOOD8008	Organisational behaviour (6 credits)
FOOD8009	Project (15 credits)

Total: 66 credits

B. COURSE CONTENTS (Provisional)

FOOD7001 Quality assurance and management (6 credits)

An overview on quality management will be presented. Case studies will be used to generate in-depth discussion on relevant topics.

The management of food laboratories will also be described, with a review of the modes of infectious disease transmission followed by discussion on microbial and other contaminants of relevance to South East Asia. Standard assays as well as newer methods will be covered. Guidelines of the Department of Health on acceptable limits and routine inspection procedures will be discussed.

FOOD7002 GMP and environmental management (6 credits)

Good manufacturing practice has a significant impact on the daily operation of a food processing facility. Quality products and a safe work place are important components of a good company. This course will focus on issues arising from GMP and aspects of the physical design of a food processing facility which impact the safety of workers and products. There will be emphases on the sources of contamination, sanitation techniques for production site and personnel, pest control, and contingency plan for the production line. Quality assurance and HACCP will be discussed as well.

Proper handling of waste is closely related to the issue of food safety, and in a broader context it has an eventual impact on the environment. This course will cover waste treatment and disposal, environmental impact assessment, operational procedures to implement ISO 14000, and laws and regulations on pollution control enforced by HKSAR's Environmental Protection Department.

FOOD7003 Food quality preservation and evaluation (6 credits)

The effects of processing and packaging on the physical and chemical characteristics of food products will be discussed. Emphasis will be placed on the freezing technology of marine products and frozen dim sums. Analytical methods for sensitive nutrients and techniques to preserve the characteristic aroma and taste of a product in processing modification will be reviewed. Issues related to nutrient enrichment and fortification will be discussed.

Sensory evaluation as an important component of food product development and marketing will be covered. Various evaluation methods and analytical techniques will be discussed in a case study setting.

FOOD7004 HACCP and food laws (6 credits)

As a core quality management tool in the food industry, the relevance, impact and use of HACCP in manufacturing and catering will be discussed. Topics covered will include the integration of HACCP and ISO 9000 as well as the practical implementation of HACCP using Asian case studies.

The course will provide students with a proper perspective on local, Chinese and international food laws and regulations. Familiarisation with international agencies such as the Codex Alimentarius Commission. Issues related to food inspection, food additives, and contaminants as well as the concept of and procedural details in attaining ISO registration will be discussed.

FOOD7005 R&D and export market strategies (9 credits)

The role of research from the management perspective, the R & D process and the impact of technological innovation on the development of new products will be discussed.

Cultural aspects will be emphasized as an important consideration in developing new market frontiers. The strengths and weaknesses of major “Chinese food” manufacturers will be analyzed. Areas of potentials will be identified and explored.

Basic concepts of intellectual property rights will also be described in this course: copyright, trademarks, trade secrets, patents. Patent strategy for research-intensive technology companies. Practical aspects and international considerations in filing for patent protection.

The application of information technology in food manufacturing and catering will be discussed.

FOOD8006 Marketing management (6 credits)

The course is designed to provide an understanding of the role of marketing in the business organization and its contribution to business success. Students will be taught in an applications oriented framework to become familiar with the various marketing concepts, marketing programs and planning and control of marketing strategies. On completion of the course students will be able to analyze customer requirements, the competitive environment and to formulate effective marketing programme. Perspectives of local food manufacturers will be introduced through special seminars.

FOOD8007 Financial control (6 credits)

The course aims to equip non-accounting professionals with the skills required to analyse and interpret the major financial reports prepared by businesses. The focus of the course is on providing a user perspective of the financial statements rather than on specific preparation concepts. In addition, the course addresses principles of basic financial management and explains the need for internal control

procedures. Particular emphasis is given to developing an understanding of the balance sheet, profit and loss statement, and cash flow statement. The relationship between the statements will be explained and illustrated in detail. A framework for making business decisions by analysing a set of financial statements using simple techniques will also be developed.

FOOD8008 Organisational behaviour (6 credits)

The course aims to equip students with a better understanding of the complex array of behaviours in organisational life. It will analyse the determinants of human behaviour in an organisation at the individual, group and organisational levels. Topics covered will include motivation, performance management, group dynamics, leadership, organisational culture, management of conflict, management ethics, and the management of change.

FOOD8009 Project (15 credits)

This is an individual or group research project to be carried out under the supervision of one or more faculty members. Students may propose their own topics and approach potential supervisors, or they may consider those suggested by the faculty members. The proposed project title must be submitted for approval by June 30 of the first year of their study. The candidates shall make a formal presentation on the subject of his/her project during the final semester of the teaching programme. The deadline for submission of the project report is April 30.

SYLLABUSES FOR THE DEGREE OF MASTER OF SCIENCE IN THE FIELD OF MATERIALS SCIENCE

A. COURSE STRUCTURE (Provisional)

The list of courses and their contents set out below, may be changed from time to time.

The typical loading of a 6 credit course is equivalent to 3 hours of lectures per week for 12 weeks. Some courses will have a combination of lectures and laboratory classes with an equivalent loading.

For students following the one-year full-time programme:

1. Students will follow the same curriculum (51 credits) as the part-time programme.
2. Student will join the evening classes of the part-time programme.

Two compulsory courses (15 credits) will be offered:

- MASC7001 Introduction to Materials Science (6 credits)
MASC7004 Materials Characterization (9 credits)

Six elective courses (36 credits) will be offered:

- MASC7002 Properties and Applications of Organic Materials (6 credits)
MASC7003 Nanostructured Materials (6 credits)
MASC7005 Thin Film Physics and Technology (6 credits)
MASC7006 Microelectronics and Optoelectronics: Devices and Applications (6 credits)
MASC7007 Biomaterials (6 credits)
MASC7008 Mechanical Service Behaviour of Materials (6 credits)

* When a suitable supervisor is available, qualified students may select MASC7009 Project (12 credits) to replace two out of the six courses.

B. COURSE CONTENTS (Provisional)**Compulsory courses****MASC7001 Introduction to Materials Science (6 credits)**

To provide basic knowledge of materials, their classifications and properties in relation to atomic and microscopic structures. Course contents include structure and bonding, solid state chemistry and physics, mechanical properties of materials, equilibrium and non-equilibrium structures, grain boundaries, elasticity, metals, ceramics, electronic, magnetic, and optical properties. Students are required to take this course in the first semester of their studies.

MASC7004 Materials characterization (9 credits)

To provide students with knowledge of advanced instrumentation, techniques and their applications in the characterization studies in materials science. Laboratory classes will be scheduled.

Course contents include selected topics from the following: Imaging techniques: Scanning Electron Microscopy (SEM), Scanning Transmission Electron Microscopy (STEM), Scanning Tunneling Microscopy (STM), Atomic Force Microscopy (AFM); Electronic and Chemical Characterization: X-ray Photoelectron Spectroscopy (XPS), Auger Electron Spectroscopy (AES), X-ray Absorption Edge Spectroscopy and Extended X-ray Absorption Fine Structure Spectroscopy (EXAFS), Low Energy Electron Diffraction (LEED), Reflection High Energy Electron Energy Diffraction (RHEED), High Resolution Electron Energy Loss Spectroscopy (HREELS), Surface Enhanced Raman Spectroscopy (SERS), Laser Induced Fluorescence (LIF), Induction Coupled Plasma (ICP); Fourier transform and analysis, spherical harmonics, basic programming, x-ray diffraction methods (XRD), vibrational spectroscopy: Infrared absorption, Raman scattering.

Elective courses (Six courses or select four courses plus MASC7009)**MASC7002 Properties and Applications of Organic Materials (6 credits)**

To provide an overview of the properties of molecular and polymeric materials and their applications in advanced technology. Course contents include structure-property relationships of organic materials; introduction to polymer science; polymer characterizations (GPC, TGA, DSC); optical, electrical, high temperature, high strength materials; liquid crystalline materials for display and other applications. Hands on experience through laboratory classes.

MASC7003 Nanostructured Materials (6 credits)

Nanostructured materials have at least one characteristic dimension in the nanometer scale of 1-100 nm. The course is designed to introduce the properties, synthesis, characterization, and applications of nanostructured materials. Special topics are given to reflect the latest developments in the field.

MASC7005 Thin Film Physics and Technology (6 credits)

This course covers the basic theory and techniques of physical deposition processes and thin film applications in materials science.

The course deals with the theory of material growth and epitaxy, lattice engineering, basic knowledge of vacuum technology, working principles of various thin film deposition processes, micro structures, and lithography. It introduces various thin films of novel materials, multilayer structures, and their industrial applications. Some experiment sessions will be scheduled.

MASC7006 Microelectronics and Optoelectronics: Devices and Applications (6 credits)

This course introduces the most commonly used solid-state devices for microelectronic and optoelectronic applications. Emphasis is put on the basic principle of operation of these devices. Relevant circuitry with which such devices are used will also be presented.

Course contents include: Bipolar junction transistor and field-effect transistor (MOSFET) and their uses in signal amplifier, digital logic gates, etc. Light emitting diode (LED) and semiconductor laser diodes (LD), photo-detector and solar cell. Some modern devices such as quantum well laser, hetero-junction transistor (HBT, HEMT).

MASC7007 Biomaterials (6 credits)

This course aims at providing students with an understanding of the various materials engineering issues and challenges concerning successful design of implants and prostheses in medical engineering. The microstructure, properties and processing methods of the various types of materials, and their interactions with the human body, which dictate their selection, will be introduced.

Course contents include: Concept of biomaterial; metallic implant materials, bioceramics, biopolymer and composite implant materials, tissue response to implants, medical devices and evaluation, soft and hard tissue replacement, introduction to tissue engineering.

MASC7008 Mechanical Service Behaviour of Materials (6 credits)

To provide students coming from a science background with the following:

- (a) the relevant physical basis for the understanding and prediction of the mechanical service behaviour of materials in industrial applications;
- (b) the knowledge to engineer the microstructure in such a way that the service behaviour of materials can be improved.

Course contents include: yield; fracture; fatigue; creep; corrosion; case studies.

MASC7009 Project (12 credits)

The course provides experience of materials science research by planning and carrying out a small project under the supervision of a member of staff. A limited number of projects are available and only qualified students may be admitted. This course is equivalent to two 6-credit courses.
