

REGULATIONS FOR THE DEGREE OF MASTER OF SCIENCE IN ENGINEERING (MSc[Eng])

(See also General Regulations)

Any publication based on work approved for a higher degree should contain a reference to the effect that the work was submitted to The University of Hong Kong for the award of the degree.

The degree of Master of Science in Engineering (MSc[Eng]) is a postgraduate degree awarded for the satisfactory completion of a course of study in the Faculty of Engineering. The major part of the curriculum must be formed from modules offered in one of the following fields: building services engineering, electrical and electronic engineering, energy engineering, environmental engineering, geotechnical engineering, industrial engineering and logistics management, infrastructure project management, mechanical engineering, structural engineering, and transportation engineering. The MSc(Eng) programme is offered in part-time and full-time mode.

E12 Admission requirements

To be eligible for admission to the courses leading to the degree of Master of Science in Engineering, a candidate shall

- (a) comply with the General Regulations;
- (b) hold
 - (1) a Bachelor's degree of this University in a relevant subject¹; or
 - (2) another relevant qualification of equivalent standard from this University or from another university or comparable institution accepted for this purpose; or
 - (3) a Postgraduate Diploma in Engineering (PDipEng) of this University in a relevant field²;
- (c) satisfy the examiners in a qualifying examination if required.

E13 Qualifying examination

- (a) A qualifying examination may be set to test the candidate's formal academic ability or his ability to follow the courses of study prescribed. It shall consist of one or more written papers or their equivalent and may include a project report.
- (b) A candidate who is required to satisfy the examiners in a qualifying examination shall not be permitted to register until he has satisfied the examiners in the examination.

¹ For MSc(Eng) in Building Services Engineering: engineering or related sciences.
For MSc(Eng) in Electrical and Electronic Engineering: physics, mathematics or engineering.
For MSc(Eng) in Energy Engineering: engineering or related sciences
For MSc(Eng) in Environmental Engineering: engineering or related sciences.
For MSc(Eng) in Geotechnical Engineering: civil engineering.
For MSc(Eng) in Industrial Engineering and Logistics Management: engineering, science, mathematics, statistics or related business studies.
For MSc(Eng) in Infrastructure Project Management: engineering.
For MSc(Eng) in Mechanical Engineering: engineering, physical sciences or mathematics.
For MSc(Eng) in Structural Engineering: civil engineering.
For MSc(Eng) in Transportation Engineering: engineering or related sciences.

² Apply to students admitted to Postgraduate Diploma in Engineering in academic year 1998-99.

E14 Award of degree

- (a) To be eligible for the award of the degree of Master of Science in Engineering a candidate shall comply with the General Regulations; and complete the curriculum and satisfy the examiners in accordance with the regulations set out below.
 - (b) A candidate who has completed eight modules but has not satisfied the examiners for the award of the degree of Master of Science in Engineering may be awarded a PDipEng, subject to approval of the Faculty Board.
-

E15 Length of curriculum

For the part-time mode of study, the curriculum shall extend over not less than two and not more than three academic years of study. For the full-time mode, the curriculum shall extend over not less than one and not more than two academic years of study. In both cases, a minimum of 300 hours of prescribed work are required.

E16 Completion of curriculum

- (a) To complete the curriculum a candidate shall, within the prescribed maximum period of study stipulated in Regulation E15 above:
 - (i) follow courses of instruction and complete satisfactorily all prescribed practical / laboratory work; and
 - (ii) satisfy the examiners in all forms of assessment as may be required in either
 - (1) twelve modules which may include a project report or dissertation of four modules;
or
 - (2) at least nine modules successfully completed at this University (which may include a project report or dissertation of four modules) and not more than three modules successfully completed at this or another university before admission to the Master of Science in Engineering and approved by the Faculty Board.
 - (b) A candidate who fails to fulfill the requirements within the specified (i) three years for the part-time mode of study (ii) two years for the full-time mode shall be recommended for discontinuation under the provisions of General Regulation G12, except that a candidate, who is unable because of illness or circumstances beyond his control to complete the requirements within the prescribed maximum period of study, may apply for permission to extend his period of studies. Any such application shall be made within two weeks of the first day of the examination paper in question.
-

E17 Course selection

- (a) Selection of study patterns shall be made in consultation with and be subject to the approval of the Head of the Department³ concerned.
- (b) A candidate who is permitted to select 12 modules not including a project report or dissertation of 4 modules shall select eight modules from the syllabuses of the candidate's approved field of study.
- (c) A candidate who is permitted to select 8 modules and a project report or dissertation of 4 modules shall select a minimum of five modules from the syllabuses of the candidate's approved field of study.

³ The Course Co-ordinator in respect of MSc(Eng) in Building Services Engineering and the Programme Director in MSc(Eng) in Internet Computing and in Electronic Commerce.

- (d) Subject to the approval of the Faculty Higher Degrees Committee on the recommendation of the Head of the Department³ concerned, a candidate may in exceptional circumstances be permitted to select an additional module.
-

E18 Project report or dissertation

- (a) For part-time mode of study, a candidate shall submit the title of his project report or dissertation by a date specified by the Board of Examiners. A candidate may submit his completed project report or dissertation after the successful completion of four modules but shall not submit it later than the end of April of the third academic year of his studies unless special permission is granted for this period to be extended.
- (b) For the full-time mode of study, a candidate shall submit the title of his project or dissertation by a date specified by the Board of Examiners. A candidate must submit the completed project report or dissertation not later than the end of April of the second academic year of his studies unless special permission is granted for this period to be extended.
- (c) All candidates enrolled in any mode of study shall submit a statement that the project report or dissertation represents his own work (or in the case of conjoint work, a statement countersigned by his co-worker, which shows his share of the work) undertaken after the registration as a candidate for the degree.
-

E19 Examinations

- (a) The written examination for each module shall be held after the completion of the prescribed course of study for that module, and not later than January, May or August immediately following the completion of the course of study for that module.
- (b) A candidate who has failed to satisfy the examiners in a module or modules may be permitted to present himself either for re-examination in the module or modules of failure or for examination in the same number of new modules when the examination is next held. To proceed to the following year of the curriculum, a candidate must satisfy the examiners in a minimum of two modules in each academic year. A candidate who passes in less than two modules in an academic year may be recommended for discontinuation of studies under the provisions of General Regulation G12.
- (c) A candidate who has presented an unsatisfactory project report or dissertation may be required to submit a revised project report or dissertation on the same subject within a specified period.
- (d) A candidate who has presented an unsatisfactory project report or dissertation for a second time shall be recommended for discontinuation of studies under the provisions of General Regulation G12.
- (e) A candidate who has failed to submit a satisfactory project report or dissertation within the prescribed maximum period of study, including any extension, shall be recommended for discontinuation of studies under the provisions of General Regulation G12.
-

E20 Examination results

At the conclusion of the examination and after presentation of the project reports or dissertations, a pass list shall be published. A candidate who has shown exceptional merit or merit at the whole examination may be awarded a mark of distinction or credit, as appropriate, and this mark shall be recorded on the candidate's degree diploma.

SYLLABUSES FOR THE DEGREE OF MASTER OF SCIENCE IN ENGINEERING⁴

MSC(ENG) IN BUILDING SERVICES ENGINEERING

Programme Objectives

The programme provides advanced education in the fields of design, management and operation of modern building services engineering systems to practising engineers or related professionals who wish to acquire new knowledge and keep abreast of technical developments in the building services industry.

Modes of Study

There are two modes of study available: full-time or part-time. Classes will normally be arranged in the evening on weekdays and in the morning on Saturdays. For the full-time students, some courses may also be taught in the daytime on weekdays.

The full-time programme requires a student to satisfactorily complete 8 modules and a project within a study period of 1 to 2 years. For the students enrolled in the part-time programme, they may opt to either satisfactorily complete 12 modules or 8 modules plus a project within a study period of 2 to 3 years.

Study Modules

The following study modules are the core courses of the programme. A number of these core courses will be selected for offer to students in each academic year. A student who does not undertake a project must complete at least 8 core courses whereas a student who undertakes a project must complete at least 5 core courses. Optional courses are available from other MSc programmes in the Faculty of Engineering for selection by students.

The following list is not final and some courses may not be offered every year.

MEBS6000. Utility services

Cold and hot water supply: water distribution systems, patterns of usage, estimation of requirements, simultaneous demand, storage capacity, pumping arrangements, calorifiers and water heaters; steam systems: low and high pressure systems, boilers and heat exchangers, steam supply piping and condensate return, insulation, steam trapping; drainage systems and sewage disposal: stormwater and sanitary drainage systems, rainfall intensity, simultaneous sanitary discharge, sizing of drains and sewers, methods of sewage disposal, primary and secondary treatments; types of electric motors; electromagnetism for utilities; lifts, escalators and conveyors: lift traffic analysis, design calculation, electrical and mechanical features, code of practice; electric heating; design challenges in futuristic buildings.

MEBS6001. Electrical installations

Supply rules, standards and codes of practice; types of electrical systems; distribution in buildings; factory built assemblies; protective devices and safety interlocks; overcurrent and fault protection; installation design principles; protective earthing and equipotential bonding arrangements; standby

⁴ Candidates who have failed to satisfy the examiners for the Degree of M.Sc.(Eng.) may on termination of their study be awarded a Postgraduate Diploma in Engineering, subject to approval of the Faculty Board.

generators; electrical safety; distribution transformers; switchgear and fuses; motor control gears; selection of electrical equipment and conductors; electromagnetic interference; lightning protection.

MEBS6002. Lighting engineering

Lighting physics; vision and light measurements; human perception; photometry and spectrophotometry; colorimetry; calculations of photometric data; glare control; guidelines for lighting design. Light production; artificial light sources and luminaires; daylighting; daylight factor; split flux formula; optical control; interior lighting; maintained illuminance; uniformity; colour rendering; utilization factors; polar curves; vector/scalar ratio; lighting for safety; lighting for workplaces; floodlighting; illuminance as vector; illuminance in complex situations.

MEBS6003. Project management

Tendering procedure, contract documents and contract strategy, insurance; project planning, scheduling and control. Management and organization theory and practice; human resources development: motivation; leadership, organization structures, quality management; safety management; environmental issues; communication; disputes; delay analysis.

MEBS6004. Built environment

External environment: human factors, climatology; internal design criteria; thermal environment (heat): insulation for energy conservation, heat transmission, e.g. solar contribution; visual environment (light): eye and vision, light production, levels of illumination; aural environment (sound or noise): noise criteria for buildings, sources of noise and vibration, noise and vibration control; functional requirement of buildings.

MEBS6005. Building automation systems

Principles of building automation systems: system configurations; distributed processing and intelligence; types of input and output points; integrated control; direct digital control; energy, security and maintenance management. Microprocessor fundamentals: signal conditioning, processing and transmission; hardware and software development. Field devices; structured cabling; networking; interoperability; home automation. Current development; selection criteria; cost, reliability and system maintenance.

MEBS6006. Environmental services I

Different forms of energy supply to buildings: electricity, fuel oil, solar; heating and cooling systems: psychrometry, thermal comfort, heating and cooling load estimation, boilers, furnaces and other heating devices, associated equipment including piping, ducting work; refrigeration; air conditioning and ventilation: fresh air requirement, air contamination, fume and dust removal, air conditioning system design, control devices.

MEBS6008. Environmental services II

Fans and pumps: types and characteristics, parallel and series operation, system effects; complex fluid network analysis: graphical and iterative methods of solution, application to air and water systems and

analysis of building air infiltration; room air diffusion: design strategies, application of computational fluid dynamics; sea water cooling systems: design and operation, water treatment; thermal storage systems: applications, system design and economic analysis; acoustic treatment and vibration isolation: basic principles, need for control, types and methods of control.

MEBS6009. Fire services design (2 modules)

Characteristics and behaviour of fire, fire hazards of materials and buildings, fire hazards of building services and processes; smoke production and properties, smoke management principles, zone smoke control, smoke extraction and smoke vent design, staircase pressurisation, design and computational analysis; legal aspects of fire safety management and statutory regulations – COP, LPC rules and N.F.P.A. codes; fire protection strategies, architectural and structural designs, means of escape, fire detection and alarm systems, water-based fire extinguishing systems, gas-based fire extinguishing systems, special building facilities for fire safety; fire protection and design principles for special hazardous areas; hydraulic analysis; performance-based fire codes and approaches, installation and commissioning; maintenance requirements.

MEBS6010. Indoor air quality

Concept of indoor air quality, health requirements, sick building syndrome, building related illnesses, indoor air quality indicators, types, sources, characterization and health effects of pollutants, concentration, individual and population exposure, dose-response relationships, measurement and monitoring methods, ventilation, filtration, indoor air quality assessment and control, operation and maintenance, legislation and public policy issues, energy and cost implications.

MEBS6011. Maintenance and management of building facilities

Areas of facilities management; security of facilities; strategies and philosophies of maintenance; optimum control and operation; fault detection and analysis; building pathology; energy management; safety and environmental maintenance. Operational techniques in maintenance: decision making techniques; spares inventory control; resource management; computerized maintenance; measures of maintenance effectiveness. Plant availability, maintainability and reliability.

MEBS6012. Project (4 modules)

MEBS6013. Testing and commissioning

The commissioning process: design provisions, specification, documentation, planning and management, contractual responsibilities; setting to work; measurement methods: fundamentals, instrumentation, calibration, methodology, sources of error; commissioning tests on electrical and mechanical plants; balancing of fluid networks; performance testing; post construction evaluation.

MEBS6014. Computer modelling and simulation

Mathematical modelling: modelling of systems; subsystems and components, deterministic and stochastic modelling, steady-state and dynamic modelling, model format, accuracy and validation, applications to thermofluid systems for design, performance evaluation and economic analysis. Computer simulation: computer implementation of simulation models, simulation methods by

successive substitution and Newton-Raphson approach for univariate and multivariate problems, steady-state simulations for system analysis at off-design conditions, dynamic simulations for transient analysis, techniques for simulation of large systems and use of modular computer simulation packages.

MEBS6015. Natural and hybrid ventilation of buildings

Concepts of natural ventilation and hybrid ventilation, mixed-mode air conditioning, purposes of natural ventilation, driving forces, natural ventilation strategies for simple and complex buildings, design methods and guidelines, wind tunnel and small-scale testing, design processes and life-cycle analyses.

MEBS6016. Energy performance of buildings

Energy terms and concepts; energy use in buildings; energy efficient building design and operation; energy efficient technologies; building energy standards and codes; building energy analysis techniques; energy auditing of buildings; economic and financial analyses.

MEBS6017. Building intelligence

Fundamental concepts of intelligent building systems; whole building intelligence; evaluation of building intelligence; needs of occupants, cost effectiveness, economic benefits; engineering intelligence into buildings; information technology; building energy management and control systems; intelligent building design; intelligent controls; expert systems, artificial neural networks, genetic algorithms, fuzzy logic; potential and direction of future developments.

MEBS6018. Clean electrical energy and smart-grids for buildings

Smart-grid and micro-grid models for communities; clean energy sources for smart-grids, disturbance, noise and pollution in smart-grids; power quality regeneration: power conditioning and uninterruptible power supply; interconnection of smart-grids; smart meter management; power factor correction and tariff consideration; building energy codes; lightning protection.

MEBS6019. Extra-low-voltage electrical systems in buildings

Extra-low-voltage electrical systems: roles, transmission medium and network, modeling, fixed and movable systems; types. Applications in building services: electrical safety; public address system, communication, cable and satellite television, conference and interpretive systems, audio and visual systems; service integration and automation; system monitoring. Applications in property management: fire and life-saving management equipment, electronic patrol, car park management, efficiency management, CCTV, security system, access and security control, electronic receptionist. Disturbance; electromagnetic interference and protective measures.

MEBS6020. Sustainable building design

Sustainable building concepts; energy and environmental design; green building assessment methods; sustainable masterplanning; analysis methods for sustainable building projects; practical examples.

MSC(ENG) IN ELECTRICAL AND ELECTRONIC ENGINEERING

The Master of Science in Electrical and Electronic Engineering Programme, based on eight study fields of advanced technologies and management, has four different streams: General Stream, Communications Engineering, Computer and Information Engineering and Green Technology. Each candidate is required to follow a prescribed course of study comprising 12 modules, out of which the candidate has to pass at least 8 modules selected from the study fields listed below. To qualify as a graduate of the Communications Engineering Stream, the candidate must pass at least 6 modules in the Communications Engineering study field. To qualify as a graduate of the Computer and Information Engineering Stream, the candidate must pass at least 6 modules in the Computer Engineering and Networking study field. To qualify as a graduate of the Green Technology Stream, the candidate must pass at least 6 modules in the Green Technology study field. Subject to approval, candidates can select to undertake a project (ELEC6021) and in which case, General Stream candidates are required to pass at least 5 modules selected from the study fields listed below, while Communications Engineering, Computer and Information Engineering, and Green Technology Streams candidates are required to pass at least 4 modules in their respective study fields.

The Eight Study Fields

A. Communications Engineering

ELEC6006	Communications policy and regulations
ELEC6007	Internet protocols and services
ELEC6014	Digital communications I
ELEC6026	Digital signal processing I
ELEC6040	Mobile radio communications
ELEC6045	Digital communications II
ELEC6070	Cryptography and network security
ELEC6071	Wireless networking
ELEC6080	Telecommunications systems and management
ELEC6086	Mobile commerce
ELEC6087	Wireless data network standards
ELEC6089	Antennas
ELEC7051	Advanced topics in communication theory and systems
ELEC7073	Digital communications III
ELEC7077	Advanced topics in multimedia signals and systems
ELEC7144	Advanced Internet infrastructure technologies

B. Computer Engineering and Networking

ELEC6007	Internet protocols and services
ELEC6008	Pattern recognition and machine learning
ELEC6036	High performance computer architecture
ELEC6043	Digital image processing
ELEC6049	Digital system design techniques
ELEC6065	Data compression
ELEC6069	Multimedia storage systems
ELEC6070	Cryptography and network security
ELEC6071	Wireless networking
ELEC6078	Electronic commerce
ELEC6086	Mobile commerce
ELEC6087	Wireless data network standards
ELEC6102	Reconfigurable computing systems
ELEC7101	Quantum computing
ELEC7141	Advanced image processing

ELEC7144 Advanced Internet infrastructure technologies
ELEC7150 Advanced topics in computer engineering and networking
ELEC7162 Scalable parallel computing

C. Control Systems and Biomedical Engineering

ELEC6008 Pattern recognition and machine learning
ELEC6067 Magnetic resonance imaging (MRI) technology and applications
ELEC6079 Biomedical ultrasound
ELEC6081 Biomedical signals and systems
ELEC6083 Computer vision and applications
ELEC7252 Advanced topics in control theory and systems

D. Electronics

ELEC6027 Integrated circuit systems design
ELEC6032 Process and device design for VLSI circuits
ELEC6063 Optoelectronics and lightwave technology
ELEC6077 CMOS analogue integrated circuit design
ELEC6088 Flexible organic electronics
ELEC7364 Advanced topics in microelectronics

E. Electrical energy

ELEC6054 Power system dynamics
ELEC6055 Power system distribution
ELEC6057 Power system planning
ELEC6058 Power transmission
ELEC6084 Power delivery management for metropolitan cities
ELEC6085 The role of a computerized SCADA system in power system operation
ELEC7401 Advanced topics in electric drives and control
ELEC7402 Advanced electric vehicle technology
ELEC7403 Advanced power electronics
ELEC7456 Advanced power system operation
ELEC7466 Advanced topics in power system engineering
MEBS6001 Electrical installations

F. Engineering Mathematics

ELEC6031 Numerical methods for computer applications
ELEC6082 Convex programming and applications

G. Engineering Management

ELEC6601 Industrial marketing
ELEC6602 Business venture in China
ELEC6603 Success in industrial entrepreneurship
MEBS6019 Extra-low-voltage electrical systems in buildings

H. Green Technology

ELEC6078 Electronic commerce
ELEC6084 Power delivery management for metropolitan cities
ELEC6085 The role of a computerized SCADA system in power system operation
ELEC6090 Energy saving lighting
ELEC6091 Energy saving installations
ELEC6092 Green project management
ELEC6093 Green facilities management
ELEC6094 Renewable energy
ELEC6095 Smart grid
ELEC7401 Advanced topics in electric drives and control

ELEC7402	Advanced electric vehicle technology
ELEC7403	Advanced power electronics
ELEC7456	Advanced power system operation
ELEC7466	Advanced topics in power system engineering

The list below is not final and some courses may not be offered every year.

ELEC6006. Communications policy and regulations

Radio frequency management, allocation of spectrum, regulations for spectrum use, common carriers, Satellite and cables, competition and compliance, ITU, long term policy planning.

ELEC6007. Internet protocols and services

Fundamentals of computer networking; performance metrics; Internet backbone and access technologies; link-layer and LANs; bridge protocols; network layer and routing; IP addressing; transport layer and TCP; congestion control; UDP; application layer and WWW; HTTP; network services: SMTP and sendmail, DNS and BIND, network management and SNMP; introduction to secure protocols: IPSec, SSL, and TLS.

ELEC6008. Pattern recognition and machine learning

Bayes decision theory; parametric and non-parametric techniques; linear discriminant functions; unsupervised learning and clustering; feature extraction; neural network techniques; context-dependent classification; case studies.

Pre-requisite: A good background in linear algebra, programming experience.

ELEC6014. Digital communications I

Basics of stochastic processes; source coding; characterizations of signals; AWGN channels; channel capacity; modulation and demodulation; synchronization; equalization.

ELEC6021. Project (4 modules)

ELEC6026. Digital signal processing I

One and two dimensional discrete-time signals and systems; analysis and design of digital filters, implementation issues; random processes and applications; waveform coding; spectral analysis; adaptive signal processing; applications of digital signal processing.

ELEC6027. Integrated circuit systems design

IC design route and technology considerations; logic and circuit design with MOS and CMOS: data and control flow in systematic structures; systems design and design methods; computer aids to IC design; application case studies.

ELEC6031. Numerical methods for computer applications

General principles of computer application; accuracy and error analysis; series and functions; linear algebra; nonlinear equations; finite differences applied to interpolation, integration and differentiation; special topics in optimization, Monte Carlo method or Fourier methods.

ELEC6032. Process and device design for VLSI circuits

Design of submicron MOS and bipolar devices; scaling schemes and their related problems; introduction to process and device simulation tools; capabilities and limitations; methodology in process and device developments; case study of a typical IC process; advanced IC technologies.

ELEC6036. High-performance computer architecture

Introduction to high-performance model processors; pipelining and instruction-level parallelism; advanced pipelining design: scoreboard and Tomasulo algorithm; speculative execution (branch prediction supported by reorder buffers); advanced technologies: value prediction, instruction reuse; advanced computing model: grid computing; cloud computing; case studies (e.g. cloud architecture examples including the GrepTheWeb architecture).

Prerequisite: ELEC2401 Computer architecture (for undergraduate students only)

ELEC6040. Mobile radio communications

Introduction to mobile radio communications; statistical communication theory; elements of mobile radio communication systems; error performance over radio links; cellular systems; elements of cellular systems design; the digital cellular systems and the future systems.

ELEC6043. Digital image processing

Properties and descriptions of digital images; image formation, sampling, time and frequency representations; wavelets; image enhancement, restoration, filters, and edge detection; human visual system, color, and sensors; binary image processing and morphological filters; coding and compression.

Prerequisite: Exposure to signals and systems at the level of ELEC2201

ELEC6045. Digital communications II

Introduction; direct sequence; frequency/time hopping and hybrid systems; characteristics, anti-jam, multiple access; generation and detection of spread spectrum signals; applications to secure communications, digital cellular mobile systems.

ELEC6049. Digital system design techniques

Hardware description language; mixed-level and mixed-mode simulation techniques; logic and system synthesis; testing, fault analysis and grading, design for testability; programmable logic devices and applications; high speed digital system design.

ELEC6054. Power system dynamics

Synchronous machine modelling; load models; small-signal stability; transient stability; voltage stability; subsynchronous resonance; mid-term and long-term stability; numerical methods, direct methods, methods of improving stability.

ELEC6055. Power system distribution

Substation configuration and design; feeder design fault detection and isolation; restoration; voltage regulation; secondary circuit design; distribution system reliability analysis; distribution automation.

ELEC6057. Power system planning

Optimal generation expansion; load forecasting; reliability evaluation; probabilistic production costing, Monte Carlo simulation; value of service; least cost planning; electricity pricing.

ELEC6058. Power transmission

High voltage a.c. transmission. Steady-state and transient performance of transmission lines. System simulation. Lightning performance. Overvoltages and insulation coordination. Reactive power control, SVC's, Field effects, corona, radio interference and noise. High voltage d.c. transmission. Thyristor valves, converter operation, harmonics and filters, protection and insulation coordination.

ELEC6063. Optoelectronics and lightwave technology

Optical waveguides and fibers, Lasers and light emitting devices, active and passive optoelectronics devices, optical network, and fiber system designs.

ELEC6065. Data compression

Lossless compression, image compression, video compression, audio compression, coding standards.

ELEC6067. Magnetic resonance imaging (MRI) technology and applications

Fundamentals of Nuclear Magnetic Resonance (NMR); introduction to MR imaging system; design principle of permanent and super-conducting magnets; RF antennas (probes), gradient coils, RF transmitter and receivers; signal processing and imaging reconstruction; basic pulse sequence design; advanced fast imaging methods; MR spectroscopy and MR imaging applications, including functional MRI in human brain functional research and clinical applications.

ELEC6069. Multimedia storage systems

Basic characteristics of multimedia data, compression standards, storage organizations, disk scheduling, data migration, and cache replacement.

ELEC6070. Cryptography and network security

This course focuses on the mathematical concepts and techniques behind the state-of-the-art information encryption and network security technologies. Also covered are the security threats and their possible countermeasures, secure protocols, and other network security related schemes (authentication, key management, etc.).

Prerequisite: ELEC2701 Internet technologies and applications or CSIS0234 Computer and communication networks (for undergraduate students only)

ELEC6071. Wireless networking

Overview of existing wireless networking services and technologies; requirements and challenges for mobile data network design; access technologies; short-range wireless technologies: Bluetooth, IEEE 802.11x WLAN, and coexistence issues; mobility management; protocol adaptations for wireless networking: Mobile IP, WAP, TCP over wireless; wireless resources management: packet scheduling, power management, ad hoc routing; mobile data network security; emerging mobile data architectures and services; mobile data application issues: wireless cache invalidation, wireless video, location dependent services.

Prerequisite: ELEC2402 Computer communications or CSIS0234 Computer and communication networks (for undergraduate students only)

ELEC6077. CMOS analogue integrated circuit design

CMOS device characteristics. Device modelling and operations. Small-signal analyses. Operational amplifier architecture, analysis, design and implementation. Functional blocks in analogue signal processing such as single-transistor amplifiers, differential pairs and multi-transistor amplifiers, and different types of current mirrors. Transistor circuits at high frequencies, operational amplifiers at high frequencies. Feedback and compensation techniques in amplifiers.

Prerequisite: Prior exposure to CMOS & VLSI design (e.g., ELEC1614, ELEC3612 or alike).

ELEC6078. Electronic commerce

Introduction; business-to-consumer (B2C) model; business-to-business (B2B) model; internet marketing; e-commerce technologies; web-site design; mobile commerce; client-side security; communication channel security; server-side security; electronic payment; future directions.

ELEC6079. Biomedical ultrasound

Ultrasound biophysics, scanning modes, data acquisition schemes, transducer basics; applications of ultrasound including imaging, flow analysis, microscopy, therapy.

ELEC6080. Telecommunications systems and management

Introduction to ICT industry, its latest development and issues; telecommunications systems including fixed, mobile, Internet and cable systems; telecommunications services, development, provisioning and delivery; telecommunications policy and regulation; telecommunications management: external and internal views of telecommunications management, TMN model and other hot issues.

ELEC6081. Biomedical signals and systems

Biomedical signals, ECG, EEG, EMG, spectral analysis, time-frequency analysis, filtering, blind source separation, recognition.

ELEC6082. Convex programming and applications

Introduction; Convex functions, convex sets, and convex problems; LP (linear programming); QP (quadratic programming); GP (geometric programming); LMI ((linear matrix inequality); SDP (semidefinite programming); SOS (sum of squares); PP (polynomial programming); Applications in biology, control, finance, and transport; Matlab tools for convex optimization.

ELEC6083. Computer vision and applications

Introduction to computer vision, camera model and image formation, projective geometry, feature detection and correspondence, stereo vision, epipolar geometry, structure from motion, camera calibration, industrial applications.

ELEC6084. Power delivery management for metropolitan cities

Delivering electricity safely, reliably, cost-effectively and environmentally friendly in metropolitan cities. Challenge in supplying super-reliable electricity to high-rise buildings. Meeting and Surpassing customers' expectations in supply reliability, power quality and associated services. Asset management and maintenance strategies. State-of-the-art protection, control and metering systems. Legislative requirements for safe and green power transmission and distribution.

ELEC6085. The role of a computerized SCADA system in power system operation

Design of a SCADA system for power system control and automation: alarm monitoring, event logging, data acquisition and supervisory control. Automation and economization functions: unit commitment, economic dispatch, automatic generation control. Operational support functions: state estimation, post mortem analysis and training simulator.

ELEC6086. Mobile Commerce

Introduction, subscriber applications, enterprise applications, development platforms for mobile applications, SMS and MMS technologies and applications, mobile connectivity, mobile security, mobile payment, TD-SCDMA and m-commerce development in China, development of WiFi and ubiquitous cities, industry case studies, ICT convergence and future development.

ELEC6087. Wireless data network standards

Wireless network standards: Architecture, components, and protocols; Cellular technology, UMTS and Evolved packet core, LTE/SAE; WirelessLAN standards extensions, WiMAX standards. Wireless network technology: wireless applications, wireless links, IP standards, mobility in different wireless systems, ID-Locator split protocols, IETF standards for wireless data networks.

ELEC6088. Flexible organic electronics

Organic semiconductor materials, electrical and optical properties of organic materials, and organic devices such as light emitting devices, solar cells and transistors.

ELEC6089. Antennas

Principles and characteristics of modern antennas: radiation pattern, polarization, directivity, gain, efficiency, impedance bandwidth and antenna transfer function.

ELEC6090. Energy saving lighting

Introduction to light and sight; Lighting calculations and measurement; Radiometry and photometry; Vision and colour; Lighting technologies; Incandescent lamps; Fluorescent lamps; Solid-state lighting; Comparison of efficiencies of lighting technologies; Optics and control of light; Lighting design.

ELEC6091. Energy saving installations

Electrical energy distribution; types of distribution systems; installation design principles; energy load pattern, maximum demand and energy diversity; protective devices and safety interlocks; purposes of earthing; equipotential bonding arrangements. City main and alternative energy sources; energy loss and leakage; power quality study; power conditioning; electromagnetic interference; power factor correction and tariff scheme. Electrical energy saving development.

ELEC6092. Green project management

Scope and value of green projects; clarity of mission and goals; audit and feasibility study. Green project planning, scheduling, and control. Contract management: project strategy, contract documents, tendering procedure and contingency. Site implementation: partnership collaboration; project quality assurance; safety management; environmental issues and risk management. Green project team development: organization structure; motivation; leadership skill; conflict management and communication skill.

ELEC6093. Green facilities management

Green assets; green facilities and green processes. Roles and objectives of green facilities management; characteristics of green facilities; design, commissioning, operation and maintenance. Application of probability functions; failure and survival study; measures of mission success; system configuration. Green maintenance and replacement strategies; philosophies and models; operational audit and

performance trend analysis; condition-based monitoring; reliability-centred maintenance; computerized facilities management. Facilities management organization.

ELEC6094. Renewable energy

Renewable energy sources: hydro power, pumped storage, wave, wind, solar, geothermal, biomass; biofuel, ethanol-fuel and recycle wastes; their nature; sustainability; operating principles and cleanliness; incentives and barriers; utilization, efficiency and effectiveness. Management of renewable energy and its sustainability. Energy storage: flywheel, batteries and fuel cell; hybrid system and integration; a.c. and d.c. electricity conversion; electricity quality regeneration; power conditioning and renewable energy to grid.

ELEC6095. Smart grid

Smart power grid operation and control; distributed generation and renewable energy integration to power grid; power system automation; demand side management; smart home and smart appliances; smart meter and advanced metering infrastructure; energy storage and electrical vehicle; information and communication technology applications in smart grid; energy saving; smart agent for efficiency optimization.

ELEC6102. Reconfigurable computing systems

Introduction to fundamentals of reconfigurable computing; Field programmable gate array (FPGA) architectures; Advance computing system architectures; Hardware/Software co-design; Reconfigurable computing operating systems; Energy-efficient high-performance computing and applications. Recent developments in the field will also be used as case studies.

Prerequisite: Knowledge in digital system design and high performance computer architectures.

ELEC6601. Industrial marketing

Business to business marketing; value chain; character of industrial marketing; marketing opportunities; marketing strategies; channel relationships; sales and sales management; marketing communications; customer programs; business ethics; and crisis management.

ELEC6602. Business venture in China

China economic landscape briefing; foreigner's perception on China; absolute advantages of overseas and SAR Chinese; forms of ventures; business competition; modeling negotiation; building successful ventures in China.

ELEC6603. Success in industrial entrepreneurship

Framework for entrepreneurship; identifying resources, capabilities, environments, opportunities and strategies; business plan; financing the new venture; risk balancing and staged financing; creating an organization.

ELEC7051. Advanced topics in communication theory and systems

This course aims at offering an in-depth view of some research topics of current interest in the field of communication theory and systems.

ELEC7073. Digital communications III

Introduction, adaptive modulation, channel coding, digital communications through fading multipath channels, ARQ.

ELEC7077. Advanced topics in multimedia signals and systems

The course covers core and selected topics in multimedia signals and systems.

ELEC7101. Quantum computing

Quantum states, operators and observables, time evolution, spin 1/2 particles; quantum gates; quantum adder; quantum algorithms: Deutsch-Jozsa algorithm, Grover's algorithm, Shor's algorithm; quantum cryptography, quantum key distribution; quantum teleportation.

Prerequisite: A good background in linear algebra

ELEC7141. Advanced image processing

2D and 3D image acquisition and optical systems; imaging with coherent and incoherent light; optical transfer functions, modulation transfer functions, and aberrations; image restoration, reconstruction, and super-resolution; holography; image feature extraction and inspection systems; denoising; image segmentation and mathematical morphology.

Prerequisite: ELEC3504 or ELEC6043 or the consent of the instructor.

ELEC7144. Advanced Internet infrastructure technologies

Web caching and load balancing; contents distribution networks (CDNs); Multimedia networking: streaming, RTSP, RTP, RTCP, H.323, session management and conference control; buffer design; traffic shaping; Internet QoS: IntServ, DiffServ, packet scheduling, RSVP, MPLS, GMPLS; multicasting: addressing, multicast routing, reliable multicast transport; Peer-to-peer protocols; grid computing protocols.

ELEC7150. Advanced topics in computer engineering and networking

This course aims at offering an in-depth view of some research topics of current interest in the field of computer engineering and networking.

ELEC7162. Scalable parallel computing

Commodity microprocessors, high-performance networks, symmetric multi-processor, clusters of PC/workstations, massively parallel processors, scientific and commercial applications, distributed multi-media and scalable computing.

ELEC7252. Advanced topics in control theory and systems

This course aims at offering an in-depth view of some research topics of current interest in the field of control theory and systems.

ELEC7364. Advanced topics in microelectronics

This course aims at offering an in-depth view of some research topics of current interest in the field of microelectronics.

ELEC7401. Advanced topics in electric drives and control

Selected topics from the latest development in the areas of electric drives and control.

ELEC7402. Advanced electric vehicle technology

Selected topics from the latest development in the areas of electric vehicle technology.

ELEC7403. Advanced power electronics

High Frequency switching converters. Dynamics and Control of switching converters. Modelling of switching converters. Components and devices. Industrial requirements.

ELEC7456. Advanced power system operation

The course is to teach advanced operation and control theory and methodology used in the energy management system of modern power systems, including economic dispatch, automatic generation control, unit commitment, hydro-thermal power coordination, state estimation, security assessment, optimal power flow and power system deregulation.

ELEC7466. Advanced topics in power system engineering

To study specific topics and issues of special current interest in power system engineering.

MEBS6001. Electrical installations

Supply rules, standards and codes of practice; types of electrical systems; distribution in buildings; factory built assemblies; protective devices and safety interlocks; overcurrent and fault protection; installation design principles; protective earthing and equipotential bonding arrangements; standby generators; electrical safety; distribution transformers; switchgear and fuses; motor control gears; selection of electrical equipment and conductors; electromagnetic interference; lightning protection.

MEBS6019. Extra-low-voltage electrical systems in buildings

Extra-low-voltage electrical systems: roles, transmission medium and network, modeling, fixed and movable system; types. Applications in building services: electrical safety; public address system, communication, cable and satellite television, conference and interpretive system, audio and visual

system; service integration and automation; system monitoring. Applications in property management: fire and life-saving management equipment, electronic patrol, car park management, efficiency management, CCTV, security system, access and security control, electronic receptionist. Disturbance; electromagnetic interference and protective measures.

MSC(ENG) IN ENERGY ENGINEERING

Each candidate is required to follow a prescribed course of study comprising 12 modules, out of which the candidate has to pass at least 8 core modules selected from the List of Core Modules. The candidate can select to undertake a project in lieu of 4 modules, and has to pass at least 5 core modules. The candidate can select elective MSc modules offered by other departments of the Faculty of Engineering.

List of Core Modules for MSc(Eng) in Energy Engineering

ELEC6084.	Power delivery management for metropolitan cities
ELEC6090.	Energy saving lighting
ELEC6095.	Smart grid
ELEC6096.	Clean electrical energy and smart-grids for buildings
ELEC7402.	Advanced electric vehicle technology
ELEC7403.	Advanced power electronics
ELEC7407.	Sustainability and Climate Change
ELEC7466.	Advanced topics in power system engineering
MEBS6016.	Energy performance of buildings
MECH6023.	Power plant technology
MECH6033.	Energy conservation and management
MECH6042.	Renewable energy technology I: Fundamental
MECH6043.	Renewable energy technology II: Advanced
MECH6044.	Energy and carbon audit
EMEE6001.	Project (4 modules)

ELEC6084. Power delivery management for metropolitan cities

Delivering electricity safely, reliably, cost-effectively and environmentally friendly in metropolitan cities. Challenge in supplying super-reliable electricity to high-rise buildings. Meeting and Surpassing customers' expectations in supply reliability, power quality and associated services. Asset management and maintenance strategies. State-of-the-art protection, control and metering systems. Legislative requirements for safe and green power transmission and distribution.

ELEC6090. Energy saving lighting

Introduction to light and sight; Lighting calculations and measurement; Radiometry and photometry; Vision and colour; Lighting technologies; Incandescent lamps; Fluorescent lamps; Solid-state lighting; Comparison of efficiencies of lighting technologies; Optics and control of light; Lighting design.

ELEC6095. Smart grid

Smart power grid operation and control; distributed generation and renewable energy integration to power grid; power system automation; demand side management; smart home and smart appliances; smart meter and advanced metering infrastructure; energy storage and electrical vehicle; information and communication technology applications in smart grid; energy saving; smart agent for efficiency optimization.

ELEC6096. Clean electrical energy and smart-grids for buildings

Smart power grid operation and control; distributed generation and renewable energy integration to power grid; power system automation; demand side management; smart home and smart appliances; smart meter and advanced metering infrastructure; energy storage and electrical vehicle; information and communication technology applications in smart grid; energy saving; smart agent for efficiency optimization.

ELEC7402. Advanced electric vehicle technology

Selected topics from the latest development in the areas of electric vehicle technology.

ELEC7403. Advanced power electronics

High Frequency switching converters. Dynamics and Control of switching converters. Modelling of switching converters. Components and devices. Industrial requirements.

ELEC7407. Sustainability and Climate Change

Cause of climate change, global warming, green house gases, reduction of green house gases, consequence of climate change, current issues: carbon trade, Clean Development Mechanism, Kyoto protocol, carbon audit, precautions and solutions of climate change.

ELEC7466. Advanced topics in power system engineering

To study specific topics and issues of special current interest in power system engineering.

MEBS6016. Energy performance of buildings

Energy terms and concepts; energy use in buildings; energy efficient building design and operation; energy efficient technologies; building energy standards and codes; building energy analysis techniques; energy auditing of building; economic and financial analyses.

MECH6023. Power plant technology

Historical development; energy resources; steam and vapour cycles; boilers; fuels and combustion; steam turbines; gas turbines; principles of nuclear energy; radioactivity; reaction rate and power shape; nuclear reactor thermal-hydraulics; pressurized water reactor power plant and its design limits.

MECH6033. Energy conservation and management

Energy sources and environmental impact; energy in buildings; energy-efficient industrial processes; waste heat recovery; energy storage; energy auditing; economic analysis; energy strategies and management.

MECH6042. Renewable energy technology I: Fundamental

Basic energy concepts; present-day fuel use; sustainability problems; introduction to various renewable energy systems including solar thermal energy and direct conversion systems, wind turbines, biomass, bio-fuels, energy from refuse, tidal power, wave energy technology, geothermal energy, hydrogen energy.

MECH6043. Renewable energy technology II: Advanced

Prospects of renewable energy sources; advanced topics on solar power (solar thermal and photovoltaics), wind power (wind energy resources, aerodynamics, components and operational characteristics), biomass (resources, energy conversion processes including gasification and pyrolysis), fuel cells (operation characteristics and electrochemistry).

Prerequisite: MECH 6042 or for students who have previously passed MECH6009 which is obsolete with effect from 2011-2012

MECH6044. Energy and carbon audit

Climate change and potential challenges; greenhouse gas emission and environmental impact; energy and carbon management opportunity; measurement & verification; carbon audit guidelines in Hong Kong; carbon footprint calculator.

EMEE6001. Project (4 modules)

Students will undertake an assigned and supervised project which will be assessed. The project must relate to the subject matter of the curriculum and be agreed by either the Department of Electrical and Electronic Engineering or the Department of Mechanical Engineering.

The list above is not final and some courses may not be offered every year.

MSC(ENG) IN ENVIRONMENTAL ENGINEERING

The curriculum provides advanced education in the field of Water and Environmental Engineering. Students are required to successfully complete twelve modules which must include a project report or dissertation of four modules, on a subject within his approved field of study. Courses are one-module courses unless otherwise specified. The list of courses below is not final and some courses may not be offered every year. Students who intend to complete the curriculum in one academic year should check with the Department of Civil Engineering for the availability of the courses.

(A) **FIVE to EIGHT modules from the following list of courses or courses approved by the Department of Civil Engineering:**

CIVL6005. Data analysis in hydrology

Time series analysis; hydrological forecasting; artificial neural networks in hydrology; chaos in hydrological time series.

CIVL6006. Advanced water and wastewater treatment

Water/wastewater characteristics and standards; coagulation/flocculation; sedimentation and filtration; membrane separation; adsorption; chemical oxidation; disinfection; biological removal of organic pollutants and nutrient.

CIVL6010. Coastal hydraulics and sedimentation

Tides and tidal currents; basic numerical techniques in mathematical models of tidal hydraulics and solute transport; tidal flushing and mariculture management; coastal sedimentation; impact of man-made changes on the coastal environment.

Prerequisite: Undergraduate course in hydraulics/fluid mechanics or equivalent

CIVL6023. Environmental chemistry

Water chemistry; microbial biochemistry; water pollution and treatment; soil chemistry; hazardous wastes; environmental chemical analyses.

CIVL6024. Environmental hydraulics

Effluent disposal; environmental transport phenomena in receiving waters; turbulent diffusion; jets and plumes; mixing in rivers and coastal waters; determination of assimilative capacity.

Prerequisite: Undergraduate course in fluid mechanics and environmental engineering or equivalent

CIVL6025. Environmental impact assessment of engineering projects

Environmental impact assessment process; methodologies to assess environmental impacts on water, air, and land; environmental management; case studies, e.g. on transportation projects, environmental control facilities and reclamation works.

CIVL6029. Groundwater hydrology

Review of groundwater flow through porous media; geotechnical applications; contaminant transport; hydrodynamic dispersion; diffusion; geochemical retardation and subsurface pathway analysis as applied to hazardous waste disposal.

CIVL6034. Municipal wastewater treatment

Municipal wastewater flows and characteristics; sewerage systems; preliminary, primary and secondary treatment processes; wastewater disinfection; advanced treatment for nutrient removal; sludge processing and disposal.

CIVL6040. Solid and hazardous waste management engineering

Resource use in modern society; sources, characteristics, and quantities of waste; environmental impact; waste prevention, reduction, and recycling; collection, transfer and transport; mechanical, biological, chemical and thermal processing; final disposal; case studies.

CIVL6050. Urban hydrology and hydraulics

Rainfall-runoff; hydrograph prediction; unsteady flow, flood routing; culvert hydraulics; flood control structures; stormwater management; storage concepts; river restoration; case studies.

CIVL6051. Water quality modelling

Mass balance and transport; biochemical processes and particle phenomena in natural environment; eutrophication; dissolved oxygen and algal dynamics; sediment-water-pollutant interactions; modelling application to rivers and estuaries.

Prerequisite: Undergraduate course in environmental engineering or equivalent

CIVL6053. Wind engineering

Statistical description of wind, parent and extreme wind data, wind profiles, wind effects on buildings and structures, wind pressures, quasi-steady approach, wind-induced vibration, dampers, codification of dynamic effects, wind effects on building ventilation, pedestrian-level wind environment, wind effects on pollutant dispersion, wind tunnel techniques.

CIVL6061. Special topic in environmental engineering A

This course provides an opportunity for students to study in-depth an area of environmental engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6062. Special topic in environmental engineering B

This course provides an opportunity for students to study in-depth an area of environmental engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6081. Advanced topics in water and environmental engineering

The course aims to provide an opportunity for students to study in-depth areas of water and environmental engineering. Course content will encompass the selected topics in environmental hydraulics, fluid mechanics, hydrology, environmental microbiology, water chemistry, water and wastewater treatment technologies.

MECH6017. Noise and vibration

For course descriptions, see the syllabuses of the MSc(Eng) in Mechanical Engineering programme.

MECH6019. Sources and control of air pollution

For course descriptions, see the syllabuses of the MSc(Eng) in Mechanical Engineering programme.

MEBS6004. Built environment

For course descriptions, see the syllabuses of the MSc(Eng) in Mechanical Engineering programme.

MEBS6010. Indoor air quality

For course descriptions, see the syllabuses of the MSc(Eng) in Mechanical Engineering programme.

(B) Not more than THREE modules from the MSc(Eng) courses offered by the Department of Civil Engineering other than those listed in (A) above, or courses offered by other Departments subject to the approval of the Head of the Department of Civil Engineering.

(C) CIVL6001. Project (4 modules)

On admission to the programme, students will undertake a supervised project which will be assessed. The project must relate to the subject matter and be agreed by the Department of Civil Engineering. In addition to satisfying MSc(Eng) Regulations E 18 and E 19, the progress of the project work will be assessed for the purpose of General Regulations G 11 and G 12 according to a timeframe set by the Department of Civil Engineering for submission of the following:

- (a) a tentative title, an outline and an inception report on the project,
- (b) a written report on the preliminary findings of the project, and
- (c) a draft dissertation and the final version of dissertation.

Failure to satisfy the examiners in the project milestones specified by the Department of Civil Engineering shall be considered as unsatisfactory performance or progress under the provisions of General Regulation G 11.

The final assessment of the project study shall be by an oral presentation AND a dissertation. Students are REQUIRED to give an oral presentation on the findings of their project studies in the form of a seminar at a time agreed by the Department of Civil Engineering prior to the submission of the dissertation. Failure in the oral presentation may lead to a failure in the project study as a whole.

MSC(ENG) IN GEOTECHNICAL ENGINEERING

The curriculum provides advanced education in the field of Geotechnical Engineering. Students are required to successfully complete twelve modules which must include a project report or dissertation of four modules, on a subject within his approved field of study. Courses are one-module courses unless otherwise specified. The list of courses below is not final and some courses may not be offered every year. Students who intend to complete the curriculum in one academic year should check with the Department of Civil Engineering for the availability of the courses.

(A) FIVE to EIGHT modules from the following list of courses or courses approved by the Department of Civil Engineering:

CIVL6002. Advanced finite elements

Equilibrium and Virtual Work Principle; Variation principle; Numerical integration; Computer applications; Convergence and Error estimate; Hybrid and mixed methods for Multi-field problems; Enhanced and assumed strain method; Nonlinear problems.

CIVL6004. Advanced soil mechanics

Soil behaviour; stresses and strains in soil masses; stress path; soil deformation and consolidation theory; soil strength and failure criteria of soils; soil modelling techniques; laboratory testing applications.

CIVL6025. Environmental impact assessment of engineering projects

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

CIVL6026. Finite element method

Elasticity; calculus of variation; energy methods; shape functions; two and three-dimensional problems; plate bending elements; field problems.

CIVL6027. Foundation engineering

Introduction to foundation engineering; shallow foundations; bearing capacity; stress distribution and settlements; deep foundations; pile installation and construction control; pile load tests; inspection of deep foundations; foundation on slopes.

CIVL6028. Ground improvement

A discussion of some principal ground improvement techniques for both granular and soft deposits, viz. surcharging with and without vertical drains, deep mixing methods, dynamic compaction and vibration, stone columns, grouting, geosynthetics and reinforced soil techniques, soil nailing and other novel schemes will be given. The principles and design considerations will be discussed through worked examples and case studies. Techniques of obtaining relevant soil parameters for design and the verification methods will also be covered.

CIVL6035. Highway pavement engineering

Traffic loading; subgrade properties; soil stabilization; bituminous materials; flexible pavement design; rigid pavement design; pavement maintenance and upgrading; pavement management systems.

CIVL6043. Special topic in geotechnical engineering A

This course provides an opportunity for students to study in-depth an area of geotechnical engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6044. Special topic in geotechnical engineering B

This course provides an opportunity for students to study in-depth an area of geotechnical engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6077. Ground investigation and soil testing

Soil and rock classification systems; field instrumentation techniques; in-situ tests; laboratory tests; stress-path and its applications; groundwater monitoring; stress measurements; GPS and laser scanning monitoring methods.

CIVL6078. Rock engineering

Rock mass classification; rock mass strength and deformability as a function of structural defects such as joints; faults and bedding planes; in-situ rock stresses and their measurement; ground water percolation in rock; underground excavations and rock support system design; rock slope stability analysis; rock foundations; case histories in rock engineering; numerical methods; rock joint strength parameters; rockfall control.

CIVL6079. Slope engineering

Slope engineering in Hong Kong; geological models for slopes; slope stability analysis methods; landslide investigation; soil nailing; slope stabilization measures; surface drainage and protection; slope construction and monitoring; slope safety management and maintenance; natural terrain study.

CIVL6083. Practical design and construction of tunnels in Hong Kong

Introduction to tunneling; shallow tunnels; deep tunnels; stress distribution and settlements around underground opening; site investigation requirements; analysis and design of underground opening; ground convergence support reaction curves, soil structure interaction; construction methods; control of groundwater; construction monitoring; risk management and construction contract.

(B) Not more than THREE modules from the MSc(Eng) courses offered by the Department of Civil Engineering other than those listed in (A) above, or courses offered by other Departments subject to the approval of the Head of the Department of Civil Engineering.

(C) CIVL6001. Project (4 modules)

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

MSC(ENG) IN INDUSTRIAL ENGINEERING AND LOGISTICS MANAGEMENT⁵

The curriculum extends over not less than two and not more than three calendar years of study. It provides advanced education and training in the philosophy, methods and techniques of Industrial Engineering and Industrial/Logistics Management which are appropriate to industrial and service organizations in both the private and the public sectors.

Candidates are permitted to select courses in accordance with regulations E16 and E17.

IELM6001. Concurrent engineering

Product development process analysis and reengineering: performance measurement, organisation and management issues and extended enterprises. Formal methods and techniques, “Design for X”, arc conjoint analysis. Product management, product variety, and engineering changes. Collaborative product commerce: information/task sharing, customer/supplier involvement and e-commerce/e-business applications. Case studies in logistics, service and manufacturing industries.

IELM6002. Operations management

Elements of operations strategies; quantitative forecasting models; strategic decisions; planning products, processes, technologies, and facilities; selection and management of production technology; capacity planning and facility location; production planning systems; aggregate planning; master production scheduling; inventory systems; material requirement planning; shop floor planning and control; Just-In-Time manufacturing.

IELM6004. Industrial project management *

Fundamental of project management; PMBOK’s project management framework; Project initiating, planning, executing, monitoring and controlling, and closing; Project integration management; Project

⁵ for student intake in/after 2005-2006.

scope management; CPM/PERT techniques for project time management, resource allocation and cost management; Earned value analysis for project tracking; Application of techniques such as EMV, decision tree analysis, and Monte Carlo simulation in project risk management, human resource management, communication, procurement and quality management for industrial projects; Project change control and management; Project team-building; Case studies in logistics and manufacturing industries.

IELM6027. Organisation theory and behavioural science

Managing and managers; evolution of management theory. Planning- decision making; strategic management; strategy implementation. Organising- organisational design and structure; power and the distribution of authority; managing organisational change and innovation. Leading- motivation; leadership; teams and teamwork; communication and negotiation. Controlling- principles of effective control; operations control.

IELM6028. Enterprise logistics and facilities design *

Enterprise logistics: materials handling systems, storage and warehousing operations, competitive manufacturing, modelling and analysis of enterprise logistics systems; location analysis; methodologies for facilities planning: systematic layout planning approaches (SLP); manufacturing strategies; layout planning algorithms.

IELM6030. Ergonomics

Ergonomics and systems design. Physical ergonomics, anthropometry, biomechanics. Human information processing, person-machine interface design, displays and controls. The visual environment and visual performance. Thermal environment and effects on performance, indices of comfort. Noise; noise measurement, effects of noise, control of noise. Vibration and acceleration; human tolerance.

IELM6034. Operational research techniques

The philosophy and methodology of Operational Research: problem analysis, model building, and implementation of solutions. Mathematical programming and its applications in logistics and supplies: vehicle scheduling, transportation and transshipments problems. Replacement models for capital equipment and preventive replacement for components of low capital value. Risk analysis for capital expenditure proposals. Queuing theory and event simulation with applications in serial and parallel supply chains.

IELM6037. Costing and finance

Cost terms and purposes, allocation and absorption of overheads, cost volume analysis, product costing, activity-based costing, budgetary control and standard costing, variance analysis, cost for decision making. Capital investment appraisal including discount cash flow, net present value and internal rate of return, risk analysis. Interpretation of financial statements, ratio analysis, fund flow statement, sources of funds, management of working capital.

IELM6042. Quality management *

The principals of Total Quality Management and BS 7850. Basic tools of quality management, the Japanese approaches to quality management, 5S and Kaizen. Deming's approach to quality management. International quality assurance management system -- the ISO 9000 series, quality documentation, quality audit. Zero defects and Six Sigma. The American Malcolm Baldrige quality award. Quality Function Deployment. The Taguchi Methods.

IELM6043. Information technology management

Planning and management approaches in IT: IT strategies; alignment planning; IT evaluation and outsourcing; managing information resources; building information systems; project implementation. Contemporary IT topics: e-commerce; IS security; impacts of IT on organizations, individuals, and society; business process re-engineering. IT applications: supply chain management; enterprise resource planning; customer relationship management; and knowledge management.

IELM6044. Supply chain management *

Supply chain characterisation; operation objectives; distribution channels; channel design considerations; logistics network design. Inventory management; risk pooling; distribution strategies. Strategic alliances; international issues in supply chain management; coordinating product and supply chain design; customer value. Information technology; decision support systems; the value of information in supply chains. Case studies and contemporary topics on supply chain management; the beer game.

IELM6045. Global operations and logistics *

Global operations and logistics strategies, strategic changes required by globalization, the strategic framework for global operations, the role of logistics in global operations and marketing strategies; global operations and logistics planning, supplier network development, physical distribution, global logistics network design, global supply chain management, risk management in global operations; management of global operations and logistics, operations analysis of global supply chains, information management for global logistics, performance measurement and evaluation in global logistics.

IELM6046. Supply management *

Purchasing in the supply chain, strategic purchasing, implementation and evaluation of strategy; purchasing organisation in a corporation, impact of e-procurement; out-sourcing, supplier selection, partnership with suppliers; pricing agreement, price analysis; global sourcing.

IELM6047. Digital enterprises

Overview and development of e-business; e-business technologies and solutions: appraisal and selection, implementation and adoption; Enterprise information and knowledge portals, virtual enterprises; Roles of e-business in enterprise development and integration; Application case studies in enterprise business processes: (product development, order taking and processing, online contract negotiation and bidding, rapid quotation and cost estimation, etc.)

IELM6048. Terminal and warehousing operations *

Materials handling systems, automated storage and distribution systems, hardware and software, routing. Case studies from cargo terminals. Warehouse management systems, missions, functions, receiving and shipping operations planning, dock design, storage space, layout and location planning, order picking. Cost and performance analysis in logistics and warehouse management. Material handling principles, system design, selection of handling equipment, unit load design. Automation of warehouse and material handling systems, costing and audits. Applications of modelling and simulation for warehouse design and optimisation. Logistics security, logistics park and third party logistics service providers.

IELM6049. Advanced manufacturing systems

Manufacturing strategies, process choice; types of advanced manufacturing systems: FMS, reconfigurable manufacturing systems, holonic manufacturing system; elements of advanced manufacturing systems: production, handling, storage, sensing and control; modelling and analysis of manufacturing systems, discrete-event simulation, queuing networks, effects of variability on system performance; manufacturing cells; modelling and design of advanced manufacturing systems; control architectures; agent-based planning and scheduling.

IELM6050. Industrial applications of radio frequency identification technologies *

Introduction to radio frequency identification (RFID); features and characteristics of readers and tags, typical frequencies, materials and orientations, middleware, standards for electronic product coding, and physical markup language. Design, development and implementation of RFID solutions; business process analysis, technology and vendor selection, deployment of readers and tags, infrastructure architecture, integration with enterprise application systems, and cost-benefits and constraints. RFID case studies and applications in object identification and tracking, asset management, warehouse management, supply chain integration, and manufacturing automation.

IELM6051. Fundamentals of law for logistics

The module focuses on five areas of law essential to industrial and logistics managers: contracts, agency, shipping law, negligence and dispute resolution; overview of sources of law and legal structure of businesses; elements of a binding contract; duties of an agent, including common carriers, employees and professionals; claims arising in international shipment of goods, arbitration, mediation or litigation and venue for dispute resolution.

IELM6025. Project (4 modules)

* Approved for reimbursement from the Continuing Education Fund (CEF).

MSC(ENG) IN INFRASTRUCTURE PROJECT MANAGEMENT

The curriculum provides advanced education in the Management of Infrastructure Projects over their entire life cycle, i.e. from conceptualisation and feasibility studies, through financing, contract administration, design, construction, commissioning, operation & maintenance, evaluation and

decommissioning. This will draw on and synergise relevant Departmental strengths in Construction Engineering and Management, Transport and Development, Environmental Engineering, Structural Engineering and Geotechnical Engineering, as well as relevant industry expertise.

Students are required to successfully complete twelve modules which must include a project report or dissertation of four modules, on a subject within his approved field of study. Courses are one-module courses unless otherwise specified. The list of courses below is not final and some courses may not be offered every year. Students who intend to complete the curriculum in one academic year should check with the Department of Civil Engineering for the availability of the courses.

(A) FIVE to EIGHT modules from the following list of courses or courses approved by the Department of Civil Engineering:

CIVL6009. Building planning and control

Buildings Ordinance and its implementation, regulations, codes of practice and practice notes; building planning process; site safety supervision and safety assurance; quality assurance of materials and construction; demolition; temporary works; drainage works; case studies.

CIVL6014. Construction dispute resolution

Introduction to disputes, claims and methods of dispute avoidance and resolution in construction; mediation; arbitration: fundamental principles, arbitration agreement, arbitration rules, appointment of arbitrators, power and duties of arbitrators, pre-hearing proceedings, hearing, award, role of the court; other ADR (alternative dispute resolution) methods; litigation.

CIVL6015. Construction financial management *

Estimating and costing; tendering strategy; productivity analysis; financial accounting; financial management; management accounting; taxation effects.

CIVL6021. Infrastructure contracts management

Infrastructure project packaging; different types and forms of construction contracts; selection of consultants and contractors; management of the tender phase; management of design; administration of construction contracts; construction claims management.

CIVL6025. Environmental impact assessment of engineering projects

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

CIVL6037. Project management - human and organisational factors *

Management theories; organisations structures and cultures; project management and project teams; leadership; ethics; communication; negotiations; recruitment.

CIVL6049. Urban development management by engineering approach

Urban development process, introductory town planning; transport modelling; integration of infrastructure and service planning; optimisation and risk management; integration of planning and implementation of engineering works; urban development; project management; principles of building control; integration of theory and practice; case studies.

CIVL6058. Management of infrastructure megaprojects

Public Works financing; Public-Private-Partnerships (PPPs) including BOT-type developments; selecting appropriate procurement frameworks; multi-party contractual links; co-ordinating large work packages; interface management; JVs and cross-cultural issues; risk management; decision analysis; value management.

CIVL6059. Special topic in infrastructure project management

This course provides an opportunity for students to study in-depth an area of infrastructure project management of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6060. Operation and maintenance of building and civil engineering works

Policies, principles and practices in operation, maintenance and rehabilitation of buildings and civil engineering infrastructure such as: bridges, roadworks, marine and port works, water supply systems and sewerage schemes; and including aspects of: inspection, appraisal, materials repair methods, monitoring systems and forensic engineering.

CIVL6073. Professional practice in building development

Buildings Ordinance and allied regulations; classification of site, plot ratio / site coverage; Town Planning Board, density zoning plan, outline zoning plans, development permission area; old and new leases; means of escape; lighting & ventilation, environmental noise control; submission to the Buildings Department / Fire Services Department / Water Services Department, application for occupation permit, checklist for occupation permit site inspection.

CIVL6074. Rights, liabilities and claims in construction contracts

Construction contracts; contractual rights and obligations; performance; breach of contract; remedies for breach; preparation and submission of claims; and claims analysis.

CIVL6075. Hong Kong, PRC and international construction law

Construction law in Hong Kong, PRC and abroad; UNCITRAL and WTO procurement frameworks; international construction contracts - FIDIC and NEC; administration of PRC projects; construction-related legislation and regulations in PRC.

* Approved for reimbursement from the Continuing Education Fund (CEF).

(B) Not more than THREE modules from the MSc(Eng) courses offered by the Department of Civil Engineering other than those listed in (A) above, or courses offered by other Departments subject to the approval of the Head of the Department of Civil Engineering.

(C) CIVL6001. Project (4 modules)

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

MSC(ENG) IN MECHANICAL ENGINEERING

Programme Objectives

The aim of the programme is to provide advanced postgraduate education in the fields of energy and power; environmental engineering; material technology; theoretical mechanics; and computer aided design and manufacturing to graduates in engineering or related science.

Course Selection

For full-time mode of study, students need to complete a project and 8 courses of which 3 courses can be chosen from other MSc programmes in the Faculty of Engineering. Each course involves 30 contact hours. Classes are mainly scheduled in weekday evenings and on Saturdays.

Curriculum

A taught Master student will not be permitted to select a course whose contents are similar or identical to any course he/she has previously taken for the purpose of fulfilling the requirements of another degree.

The following list is not final and some courses may not be offered every year.

MECH6007. Project (4 modules)

Students will undertake an assigned and supervised project which will be assessed. The project must relate to the subject matter of the curriculum and be agreed by the Department of Mechanical Engineering.

MECH6001. Advanced design methods and applications*

Engineering design; axiomatic design; creative design; design for human factors; optimization design; design for product lifecycle; design for manufacturability; design for assembly; robust design; reliability design.

MECH6003. Advanced fluid mechanics

Fundamental concepts and equations; hydrodynamic lubrication; pipe flows microscale flows; diffusion; flows in porous media macromolecular hydrodynamics.

MECH6042. Renewable energy technology I: Fundamental

Basic energy concepts; present-day fuel use; sustainability problems; introduction to various renewable energy systems including solar thermal energy and direct conversion systems; wind turbines; biomass; bio-fuels; energy from refuse; tidal power; wave energy technology; geothermal energy, hydrogen energy.

MECH6010. Service behaviour of materials

Creep regimes; creep mechanisms; creep resistant alloys; brittle fracture; ductile fracture; brittle-ductile transition; fracture mechanism maps; fatigue; Basquins and Coffin-Manson Laws; Goodman's relation; Palmgren-Miner rule; corrosion; electrochemical principles; forms of corrosion; corrosion control; case studies; introduction to polymer-matrix composites.

MECH6017. Noise and vibration

Fundamentals of acoustics; noise measurement; human hearing; noise in rooms; sound absorption and transmission through walls; environmental legislation and guidelines; fundamentals of vibration and its measurement; vibration absorption and isolation; control of noise and vibration at the source.

MECH6018. Atmospheric environment modelling

Foundations of atmospheric dynamics; models of winds; atmospheric turbulence modelling; boundary layer climates; air pollution in boundary layer; atmospheric diffusion theories.

MECH6019. Sources and control of air pollution

Basis of air pollution; air pollution transports; sources of air pollutants; control of gaseous pollutants; control of particulate matter; atmospheric dispersion modelling.

MECH6023. Power plant technology

Historical development; energy resources; steam and vapour cycles; boilers; fuels and combustion; steam turbines; gas turbines; principles of nuclear energy; radioactivity; reaction rate and power shape; nuclear reactor thermal-hydraulics; Pressurized Water Reactor power plant and its design limits.

MECH6024. Applied mathematics for engineers

Statistical and numerical methods in engineering; hypothesis testing; estimation of parameters and confidence intervals; correlation coefficient; direct and iterative methods for systems of equations; numerical analysis; finite difference and finite element schemes; wave propagation and vibration; normal modes.

MECH6026. Computational fluid dynamics

Fundamental concepts and equations of thermal fluid dynamics; finite-difference method for solving partial differential equations (stability, consistency, convergence, accuracy and efficiency, and solution of system of algebraic equations); simplified models for fluid flow (wave equation) and heat transfer (heat equation); grid generation; turbulent diffusion and shear flow dispersion; numerical solution of transport equations (mass; momentum and energy transport); applications involving the built environment, air pollution, atmospheric diffusion and dissipation, power-plant design, land- air- and marine-vehicle design; etc.

MECH6028. Processing and properties of engineering plastics

Viscosity of polymer melts, extrusion; injection moulding; blow moulding; joining; plating; yield criteria; environmental stress cracking; UV degradation; flame retardation; biodegradable polymers, viscoelastic behaviour of plastics; dynamic behaviour; design methods for plastics based on creep data.

MECH6030. Computer control for manufacturing processes

Structure of process control computers; interface; z-transform, sampling theory; discrete-time models; stability analysis; discrete controller design; optimal control; state space representation and controller design; parameter estimation; self-tuning controllers; control applications.

MECH6031. Computer automated inspection

Inspection planning; process capability; control charts; optical gauging and profiling; image acquisition and storage; lighting and optical systems; image processing and understanding; pattern recognition and decision making; coordinate measuring machines (CMM); CAD-based CMM inspection.

MECH6032. MEMS & Microsystems design and manufacturing

MEMS and microsystem products; microsensors; microactuation; multidisciplinary nature of microsystem design and manufacture; materials for MEMS and Microsystems; micromanufacturing; microsystem design; microsystem packaging.

MECH6033. Energy conservation and management

Energy sources and environmental impact; energy in buildings; energy-efficient industrial processes; waste heat recovery; energy storage; energy auditing; economic analysis; energy strategies and management.

MECH6034. Computer-aided product development (CAPD)*

CAD modeling; Haptic shape modeling; reverse engineering; prototyping; product development case studies.

MECH6036. Engineering stress and strength analysis

Introduction to fracture mechanics and fatigue analysis; design against fracture and fatigue failure; introduction to impact mechanics; design for impact loads; impact testing: charpy; izod; strain gauge method; photoelasticity; moire and interferometric methods; practical sessions.

MECH6043. Renewable energy technology II: Advanced

Prospects of renewable energy sources; advanced topics on solar power (solar thermal and photovoltaics), wind power (wind energy resources, aerodynamics, components and operational characteristics), biomass (resources, energy conversion processes including gasification and pyrolysis), fuel cells (operation characteristics and electrochemistry).

Pre-requisite: MECH 6042 or for students who have previously passed MECH6009 which is obsolete with effect from 2011-2012

MECH6039. Biomaterials and tissue engineering

Bioactive bioceramics; bioactive composites; surface modification of metallic biomaterials; blood-contacting biomaterials; advanced testing and analytical techniques for biomaterials; long-term performance of biomaterials; clinical applications of biomaterials; tissue engineering: principles, methods and applications; standards and regulatory issues.

MECH6040. Foundations of nanotechnology

Characteristic length scales, nanomaterials, nanostructures, physical properties of nanostructures, deposition techniques of nanofabrication, high resolution analysis and characterization, scanning probes methods, nanoindentation, deformation of nanostructures, mechanical behaviours of nanocrystalline solids, ultra-high strength of nanostructures, sensors, actuators, MEMS, NEMS, functional nanomaterials, nano-scale devices, modelling and computer-aided designs, bio-nanotechnology.

MECH6044. Energy and carbon audit

Climate change and potential challenges; greenhouse gas emission and environmental impact; energy and carbon management opportunity; measurement & verification; carbon audit guidelines in Hong Kong; carbon footprint calculator.

MEBS6004. Built environment

External environment: human factors, climatology; internal design criteria; thermal environment (heat): insulation for energy conservation, heat transmission; e.g. solar contribution; visual environment (light): eye and vision, light production, levels of illumination; aural environment (sound or noise): noise criteria for buildings; sources of noise and vibration, noise and vibration control; functional requirement of buildings.

MEBS6010. Indoor air quality

Concept of indoor air quality, health requirements, sick building syndrome, building related illnesses, indoor air quality indicators, types, sources, characterization and health effects of pollutants, concentration, individual and population exposure, dose-response relationships, measurement and monitoring methods, ventilation, filtration, indoor air quality assessment and control, operation and maintenance, legislation and public policy issues, energy and cost implications.

MECH7002. Advanced topics in fluid flows and transport phenomena research

Turbulence modeling and measurement, multi-phase flows, non-Newtonian fluid flows, flow visualization, environment aerodynamics, computational fluid dynamics, heat and mass transfer, surface and internal waves, stabilities and dynamics of vorticity, etc. (The topics presented may differ from year to year depending on the needs of the students and the interests of the instructor(s)).

Pre-requisites: Students who have completed MECH 2008 Mechanics of Fluids or the equivalence.

MECH7003. Advanced topics in materials research

Diffusion and related phenomena, defect theory, physical examination of materials by X-ray and electron microscopy, processing techniques, thermal and mechanical behaviour of materials, introduction to specific classes of new materials, etc. (The topics presented may differ from year to year depending on the needs of the students and the interests of the instructor(s)).

MECH7004. Advanced topics in solids mechanics research

Mechanics of electromagnetic solids, anisotropic elasticity, complex stress functions for 2-D elasticity, fracture mechanics, finite element methods, phase field methods, etc. (The topics presented may differ from year to year depending on the needs of the students and the interests of the instructor(s)).

MECH7005. Advanced topics in control engineering research

Control of multivariable systems, linear system theory, limitations of performance, robust stability and performance analysis, LQG, H₂ and H-infinity design, robust pole assignment, model reduction, singular systems, state estimation and filtering, for instance. (The topics presented may differ from year to year depending on the needs of the students and the interests of the instructor(s)).

Pre-requisites: Students who have completed MECH 2018 Dynamics and Control or MECH 3004 Automatic Control or the equivalence.

MECH7006. Advanced finite difference/volume methods

Conservation laws and (partial) differential equations, one-dimensional and multi-dimensional problems, high-order accuracy schemes, explicit or implicit schemes, surface and volume integrals, consistency, convergence and stability, non-linear equations, Navier-Stokes equations, boundary conditions, solution of linear equation systems (e.g. multi-grid, conjugate gradient), parallel computing, unsteady problems, and examples. (The topics presented may differ from year to year depending on the needs of the students and the interests of the instructor(s)).

Pre-requisites: Students who have completed courses on Basic numerical methods.

CIVL6002. Advanced finite elements

Equilibrium and virtual work principle; variation principle; numerical integration; computer applications; convergence and error estimate; hybrid and mixed methods for multi-field problems; enhanced and assumed strain method; nonlinear problems.

* Approved for reimbursement from the Continuing Education Fund (CEF) (applicable to Hong Kong Residents only).

MSC(ENG) IN STRUCTURAL ENGINEERING

The curriculum provides advanced education in the field of Structural Engineering. Students are required to successfully complete twelve modules which must include a project report or dissertation of four modules, on a subject within his approved field of study.

The list of courses below is not final, and may be changed from time to time. Courses are one-module courses unless otherwise specified. Students who intend to complete the curriculum in one academic year should check with the Department of Civil Engineering for the availability of the courses.

(A) FIVE to EIGHT modules from the following list of courses or courses approved by the Department of Civil Engineering:

CIVL6002. Advanced finite elements

For course descriptions, see the syllabuses of the MSc(Eng) in Geotechnical Engineering programme.

CIVL6003. Advanced reinforced concrete structure design

Flexural, shear and torsional behaviours of reinforced concrete members; yield line theory; strut and tie theory; effects of confinement reinforcement; design of reinforced concrete frames and shear walls; design of high-strength concrete members.

CIVL6008. Bridge engineering

Choice of structural systems; construction materials; construction methods; loading on bridges; structural analysis of bridges; bridge substructures; bridge parapets, bearings and movement joints.

CIVL6009. Building planning and control

For course descriptions, see the syllabuses of the MSc(Eng) in Infrastructure Project Management programme.

CIVL6013. Concrete technology

Concrete mixes; quality control; in-situ strength assessment; non-destructive testing; cracks and other defects; maintenance and repair.

CIVL6025. Environmental impact assessment of engineering projects

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

CIVL6026. Finite element method

For course descriptions, see the syllabuses of the MSc(Eng) in Geotechnical Engineering programme.

CIVL6027. Foundation engineering

For course descriptions, see the syllabuses of the MSc(Eng) in Geotechnical Engineering programme.

CIVL6032. Long-span structures

Design strategies for long-span structures; arches; domes; cable-supported structures; suspension and cable-stayed bridges; space frames; membrane structures; hyperbolic paraboloids.

CIVL6045. Tall building structures

Coupled shear/core walls; coupling effects of beams and slabs; finite element analysis of building structures; wall-frame interaction; framed-tube structures; tube-in-tube structures; outrigger braced structures; shear lag effects in core walls.

CIVL6053. Wind engineering

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

CIVL6060. Operation and maintenance of building and civil engineering works

For course descriptions, see the syllabuses of the MSc(Eng) in Infrastructure Project Management programme.

CIVL6063. Special topic in structural engineering A

This course provides an opportunity for students to study in-depth an area of structural engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6064. Special topic in structural engineering B

This course provides an opportunity for students to study in-depth an area of structural engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6072. Cold-formed steel structure design

Cold-formed steel structures; concepts of local buckling; effective width design method; shift of effective centroid; new design approach using direct strength method; design of structural steel building.

CIVL6073. Professional practice in building development

For course descriptions, see the syllabuses of the MSc(Eng) in Infrastructure Project Management programme.

CIVL6076. Earthquake engineering design

Earthquake hazard and ground shaking, site (soil) effects, dynamic earthquake response, seismic response spectra, general design philosophy, concept of ductility, structural system and configuration, lateral load resisting system and earthquake force distribution, structural design consideration, code consideration, aspects of detailing, overview of strengthening and retrofitting, overview of external devices as earthquake resisting system.

CIVL6080. Fire engineering design of structures

Fire behaviour, fire safety, design principles for structures in fire, prescriptive and performance-based approach, temperature prediction of compartment, temperature prediction of steel, concrete and composites members, design of steel, concrete and composite structures in fire, fire protection, assessment and repair of fire-damaged structures.

CIVL6082. Fibre reinforced polymer (FRP) composites for civil engineering applications

Types and properties of fibre reinforced polymer (FRP) composite materials and systems; analytical procedures and design philosophies of reinforcing or strengthening structural elements with FRP composites; durability and long-term performance issues; and practical examples of FRP applications in civil engineering throughout the world.

(B) Not more than THREE modules from the MSc(Eng) courses offered by the Department of Civil Engineering other than those listed in (A) above, or courses offered by other Departments subject to the approval of the Head of the Department of Civil Engineering.

(C) CIVL6001. Project (4 modules)

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

MSC(ENG) IN TRANSPORTATION ENGINEERING

The curriculum provides advanced education in the field of Transportation Engineering. Students are required to successfully complete twelve modules which must include a project report or dissertation of

four modules, on a subject within his approved field of study. Courses are one-module courses unless otherwise specified. The list below is not final and some courses may not be offered every year. Students who intend to complete the curriculum in one academic year should check with the Department of Civil Engineering for the availability of the courses.

(A) FIVE to EIGHT modules from the following list of courses or courses approved by the Department of Civil Engineering:

CIVL6007. Behavioural travel demand models *

This course will cover the basic as well as modern and advanced techniques in travel demand modelling. Topics will include demand theory, mathematical models, survey methods in transport, land use transportation models, disaggregate choice models, and behavioural concepts in choice modelling.

CIVL6025. Environmental impact assessment of engineering projects

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.

CIVL6035. Highway pavement engineering

For course descriptions, see the syllabuses of the MSc(Eng) in Geotechnical Engineering programme.

CIVL6037. Project management - human and organisational factors *

For course descriptions, see the syllabuses of the MSc(Eng) in Infrastructure Project Management programme.

CIVL6046. Theory of traffic flow *

Measurements and statistical distributions of traffic characteristics; traffic stream models; car-following theories; hydrodynamic theory of traffic flow; traffic queues and delays.

CIVL6047. Traffic management and control *

Transportation networks; network equilibrium concepts; estimation of origin-destination matrix; traffic management measures; traffic control techniques.

CIVL6048. Planning of transport infrastructure systems *

Introduction to systems engineering, urban system models, network modelling concepts and techniques, trip assignment models.

CIVL6049. Urban development management by engineering approach

For course descriptions, see the syllabuses of the MSc(Eng) in Infrastructure Project Management programme.

CIVL6054. Engineering for transport systems *

This course provides the students an engineering appreciation of the transport systems, including planning, policy formulation, design, implementation and operation. It covers both the theoretical frameworks and practical examples under various topics in transportation engineering. Key aspects of transport infrastructure development, choice of transportation systems, fixed track systems, road safety, application of technology in transport etc. will be presented.

CIVL6056. Special topic in transportation engineering A

This course provides an opportunity for students to study in-depth an area of transportation engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6057. Special topic in transportation engineering B

This course provides an opportunity for students to study in-depth an area of transportation engineering of interest to students and staff alike. The topic will be announced in the beginning of the semester when the course is offered.

CIVL6070. Logistics and transportation *

The logistics supply chain, evolution of logistics and the supply chain as management disciplines; the customer service dimensions; transportation fundamentals, transportation decisions; inventory concepts, inventory management; facility location decisions, the network planning process; logistics organization, best practice and benchmarking; discussion on contemporary issues in logistics.

CIVL6084. Statistical methods for transportation

This course will cover a wide variety of analytical tools used in transportation studies, from the fundamentals to modern and advanced techniques in data analysis. Topics will include basic tools for statistical model building, linear models, time series and forecasting, count and discrete dependent variables, duration models, and analysis of longitudinal data. Software packages such as R, SPSS and SAS will be used to support the demonstration of data analysis in the course.

* Approved for reimbursement from the Continuing Education Fund (CEF).

(B) Not more than THREE modules from the MSc(Eng) courses offered by the Department of Civil Engineering other than those listed in (A) above, or courses offered by other Departments subject to the approval of the Head of the Department of Civil Engineering.

(C) CIVL6001. Project (4 modules)

For course descriptions, see the syllabuses of the MSc(Eng) in Environmental Engineering programme.
