

REGULATIONS FOR THE POSTGRADUATE DIPLOMA IN MOLECULAR AND DIAGNOSTIC PATHOLOGY (PDipMDPath)

(See also General Regulations)

M.129 Admission requirements

To be eligible for admission to the courses leading to the Postgraduate Diploma in Molecular and Diagnostic Pathology, a candidate shall:

- (a) comply with the General Regulations;
- (b) hold a Bachelor's degree with honours or a degree of MBBS of this University, or another qualification of equivalent standard from this University, or from another University or comparable institution accepted for this purpose; and
- (c) satisfy the examiners in a qualifying examination, if required.

Advanced standing, up to a maximum of three modules, for the Postgraduate Diploma in Molecular and Diagnostic Pathology may be granted to a candidate who has successfully completed the PCMDPath; subject to the condition that the application is received for not more than two years after successful completion of the PCMDPath.

M.130 Award of diploma

To be eligible for the award of the Postgraduate Diploma in Molecular and Diagnostic Pathology, a candidate shall

- (a) comply with the General Regulations; and
- (b) complete the curriculum and satisfy the examiners in accordance with the regulations set out below.

A candidate who exits the programme after having successfully completed a minimum of 88 hours of the coursework component which includes two Molecular Pathology modules and one Diagnostic Pathology module may be considered for the award of a Postgraduate Certificate in Molecular and Diagnostic Pathology.

M.131 Length of curriculum

The curriculum shall last for two years on a part-time basis, with 200 hours of prescribed work. The maximum period of study should not exceed four years. For candidates with advanced standing, the maximum period of study should not exceed two years.

M.132 Completion of curriculum

To complete the curriculum, a candidate shall

- (a) follow instruction in the syllabuses prescribed for the 5-module programme and complete satisfactorily all required written or practical work;
- (b) satisfy the examiners in the course by continuous assessments and by examinations at the end of each module of the teaching programme; and
- (c) complete and present a satisfactory project report.

A candidate who fails to fulfil the requirements within the prescribed maximum period of study shall be recommended for discontinuation under the provision of General Regulation G12, except that a candidate who is unable because of illness or circumstances beyond his/her control to complete the requirements within the prescribed maximum period of study, may apply to the Board of Studies for permission to extend his/her period of studies.

M.133 Examinations

- (a) A candidate who has failed to satisfy the examiners in any part of the examinations may be permitted to
 - (i) attend a supplementary examination; or
 - (ii) repeat the course(s) and to re-take the prescribed examination(s); or
 - (iii) re-submit a project report.
 - (b) A candidate who has failed to satisfy the examiners in the examination of the project report, but has satisfactorily completed the prescribed work, may be permitted to resubmit the project report and to re-present it within a specified period of time.
-

M.134 Examination results

At the conclusion of the examination, the candidates will be notified of the examination result. A candidate who has shown exceptional merit at the whole examination may be awarded a mark of distinction and this mark shall be recorded in the candidate's transcript.

SYLLABUS FOR THE POSTGRADUATE DIPLOMA IN MOLECULAR AND DIAGNOSTIC PATHOLOGY

The curriculum comprises 1) lectures (86 hours), 2) tutorial/case studies/practical (36 hours), 3) self-assessment exercises (30 hours) and 4) a project with writing up a project report (48 hours). Candidates should complete all five modules with passing of the examination of all the modules; and submit a project report which is relevant to the attachment and fulfils the requirements of the examiners.

PATH6001 Principles and Techniques of Molecular Pathology (24 hours)

This module will cover the following topics: Introduction to molecular pathology and genetics; Principles of electrophoresis and immunoblotting; Principles of automated DNA sequencing and various methods of genotyping and mutation analysis; Human identity by DNA typing; Principles and applications of Quantitative-PCR; Basic concepts in conventional cytogenetics and molecular cytogenetics; In-situ hybridization techniques (ISH, FISH, CISH, SISH); Principles and applications of flow cytometry; Emerging technologies (epigenetics, gene expression profiling, stem cells); Laboratory management issues in molecular testing.

PATH6002 Clinical Applications of Molecular Testing (24 hours)

This module provides an overview of the Principles of HPV testing, its clinical relevance and the various methods of genotyping; Hepatitis B virus infection – testing for viral load and HBV DNA mutants detection; Quantification of EBV DNA plasma for EBV associated diseases; BCR/ABL kinase mutation detection for chronic myelogenous leukaemia and related disorders; KRAS mutation detection for colorectal cancer; EGFR mutation in lung cancer; In-situ hybridization tests: EBER; Kappa/Lambda; HER2 amplification in breast cancer; FISH test for early bladder cancer detection; PCR for gene rearrangements and translocations for haematolymphoid malignancies and soft tissue tumors; RET and Menin gene mutation detection for Multiple endocrine neoplasia syndrome; c-kit mutation detection for gastrointestinal stromal tumors; Gene expression profiling for haematolymphoid malignancies; Laboratory management issues in molecular testing.

PATH6003 Fundamentals of Genetic Testing for Hereditary Disorders (24 hours)

This course provides a comprehensive introduction to Molecular Genetics; Genetic testing for Thalassemia; Genetic testing for familial colorectal cancer; Genetic testing for familial breast and ovarian cancer; Molecular genetics in Paediatrics; Molecular genetics in Neurological diseases; Laboratory management issues in molecular testing.

PATH6004 Chemical Pathology, Immunology, Diagnostic Haematology and Transfusion Medicine (40 hours)

This module will cover topics on the Renal and Liver function tests; Cardiac Markers; Tumor markers; Clinical Toxicology; Expanded Newborn Screening; Pharmacogenetics, Drug Safety and Personalized Medicine; Biochemical diagnosis of adrenal disorders; Immunochemistry Tests; Autoantibody Tests; Diagnostic Haematology Test; Transfusion Medicine; Laboratory Management.

PATH6005 Essential Anatomical Pathology for Clinicians (40 hours)

Topics include Haematolymphoid malignancies: relevance of classification; Tumors of the respiratory tract and pleural cavity; Tumors of the Central Nervous System; Urologic oncology; Tumors of the breast; Endocrine tumors; Soft tissue and bone tumors; Cytological, histopathological and molecular devices for diagnosis and management of gynaecological pathology; Endometrial adenocarcinoma and its precursors and mesenchymal lesions of the uterine corpus; Tumors of the ovary and fallopian tube; Squamous and glandular lesions of the cervix: cytology and histology; Gestational trophoblastic diseases; Diseases of the vulva and vagina; Endometriosis and lesions of secondary Mullerian system; Renal biopsy procedure and specimen handling; Interpreting renal biopsies for glomerular, tubular, interstitial and vascular diseases; Classification of lupus nephritis; Banff classification of renal transplant rejection; Glomerular diseases in transplanted kidney; Laboratory management.

PATH6006 Project Report (48 hours)

For the fulfillment of the Diploma course, candidates will need to submit a project report of at least 3000 words based on a clinical and/or laboratory project which should be conducted over a period of at least 3 months within the candidate's own hospital or practice. It should reflect an application of the knowledge acquired from this course. The candidate is expected to design the project related to his work situation and have it conducted from his workplace. The choice of topic for the study should be discussed in advance with an identified supervisor who will give guidance in the writing of the project report.
